

## Radio Shack Offers IBM Compatibility

Radio Shack now offers IBM computer compatibility with the introduction of a controller that permits TRS-80 microcomputer products to communicate with IBM hosts operating SNA/SDLC protocol networks. The Tandy T-76 Communications Controller is available through Radio Shack's Special Marketing Group.

The Tandy T-76 permits the TRS-80 Model II and Model 16 microcomputers and DT-1 Data Terminals to function in an IBM SNA/SDLC network environment as

IBM 3278 CRT's with full screen editing capabilities. Additionally, the Radio Shack PT-210 Portable Data Terminal is supported by the T-76 as a printer with the full screen editing capabilities of a CRT. The Tandy T-76 is also compatible with Radio Shack's line of TRS-80 printers which can be used as IBM 3287 printers.

For more information, contact: Radio Shack Special Marketing Group, 1400 One Tandy Center, Fort Worth, TX 76102, (817)-390-2197.

### Faire Conference presentation

## IBM Personal Computer Group to Address Hardware & Software Producers & Entrepreneurs

Four to five technical specialists from IBM will provide an in-depth discussion of major technical aspects of the IBM PC at the 8th Computer Faire. Still being finalized at press time, the speakers in this program will be engineering and software professionals and managers affiliated with IBM's Personal Computer Group in Boca Raton, Florida.

They will discuss details of the hardware, interfaces, and software for the IBM PC. They will also detail the entrepreneurial opportunities and submissions program for the IBM-run software library for the PC.

This is a technical session designed for serious computer professionals and entrepreneurs interested in developing

hardware and software for the IBM PC market.

*An editorial note:* We wish to applaud the significant value of such active support of independent innovation and development by a corporation of the stature and quality of IBM. It serves the micro user community well. It serves the micro industry well. It serves IBM well. And, most particularly, this actively cooperative attitude towards other hardware and software producers is a service to the future.

It is a delightful return to the cooperative spirit of microcomputing's early years - a spirit that fostered much of the explosive innovation and rapid improvement that brought this industry to its current state in just eight short years.

## 8th Computer Faire Offers Massive Conference Program; Capacity Trade Exhibit

The 8th West Coast Computer Faire appears certain to be the most interesting and valuable micro convention yet convened, and the largest such show open to end-users. *Byte* columnist Jerry Pournelle, a long-time micro observer and sci-fi author, unequivocally stated in *Byte*: "For my money, the West Coast Computer Faire has become the most important show of the year."

Dr. Portia Isaacson, President of Future Computing and one of the best-known industry analysts in the micro world, was equally definitive in a recent comment. She stated that she regards the "West Coast Computer Faire to be one of the three or four most significant computer conventions each year, because it always offers an unusually large number of introductions of particularly innovative new products."

The 8th Faire is jammed into every nook and cranny of San Francisco's 4-story Civic Auditorium, plus all of Brooks Hall, plus all major meeting halls in the two largest hotels that are adjacent to the convention center.

Taking place March 18-20, the 8th Faire sold out of its regular exhibit space fully three months before the convention.

A month later - with the Faire still two months away - it rented its last available "microbooth". These 6'x6' microbooths are a service that is unique to the Computer Faires. They offer very low-cost exhibit space for entrepreneurs and computer craftspeople who may be very innovative, but are undercapitalized. For eight Faires, they have always been one of several major focal points for Faire attendees.

Though the Conference program is not finalized at press time, over 100 tutorial and technical papers have been submitted for consideration. Over 150 people have authored these papers, prepared talks, and/or been chosen to serve on panel sessions.

Registration for the entire 8th Faire Conference and Exposition is \$15, with pre-registration discounts available to groups [see details, elsewhere in this issue]. No checks or charges will be accepted at the door.

## Gossip Galore

by Jim Warren

(That title sounds like a character from an old James Bond story. Oh well, there's no accounting for the tastes of headline writers. Of course, we will offer no hint as to who the headliner mite be.)

For those who are not familiar with this questionable column: This is a collection of facts, semifacts, and eccentricities - of the micro world - presented for the entertainment, incitement and possible enlightenment of our fellow technojunkies.

### PE BECOMES CE

If you haven't already noticed, *Popular Electronics* magazine has become *Computers & Electronics*. In several ways, PE can be said to be the rag that created personal computing. Back in 1974, it ran articles on the design of the old "Micro-8" - a build-it-yourself non-kit based on the Intel 8008.

Then it ran the January, 1975, cover story on the MITS Altair . . . and the micro industry was off and running.

Its long-time Editor is Les Soloman, an inveterate, first-rate

electronics hobbyist (after whom, some say, Processor Technology named its Sol computer). Les has had a long, long interest in computing, and it looks like the publishing conglomerate Ziff-Davis (C&E's owner) has acknowledged the importance of computing in "popular electronics," and will now allow Les to publish bit banging to his heart's content.

### PC MAGAZINE STAFF BECOMES PC WORLD STAFF

While we are mentioning Ziff-Davis, we might point out that Z-D has recently purchased *PC Magazine* from Tony Gold, the banker behind New York City's Lifeboat Associates.

There is considerable acrimony over this purchase. Virtually every key staff member from the original *PC Mag* left in a fury (that they say was more than justified), claiming broken promises and dishonored written and verbal agreements. This en masse staff defection apparently includes all of the excellent array of special-topics editors who used to work for *PC Magazine*.

Given the phenomenal success

Registration includes Conference Program & Exhibition for all 3 days

## Venture Capital for High Tech to be Discussed at Faire

The 8th West Coast Computer Faire, in San Francisco March 18-20, will include an in-depth, 3-hour Conference program of special interest to computer innovators: "Venture Financing for New Technology Companies." This session will be composed of two panel presentations, organized by J. Michael Murphy, President of Pacific Technology Advisors.

Chaired by Frank Kline, the Managing Director of Pacific Technology Venture Management, the first panel includes J.K. Morris, Editor of the "Venture Capital Journal", S. Mendelow and C.A. Tepper, the President and Senior VP of QC Resource Group, and D.L. Larson of R&D Funding.

The second panel will be Chaired by Michael Murphy, and will include J.D. McCamant of the California Technology Stock Letter, T. Fletcher of Rothschild, Uterberg & Towbin, and D. Woodman of Woodman, Kirkpatrick & Gilbreath.

The first panel will cover a variety of topics, including preparation of a business plan for venture capitalists, the relationship between venture groups and entrepreneurs, strategic planning, and how to approach product and prototype development.

The second panel will range over such topics as institutional vs. individual investing, technology stock investments, effective use of stock brokers, and inside details of how to "go public."

## The Fortune 1000 Personal Computer Market Forum '83

A symposium for businesses dedicated to meeting the small computer needs of large corporations.

March 21-23  
The Mark Hopkins  
San Francisco  
(Immediately following the  
West Coast Computer Faire)

"This is a new market, and in many ways, a unique market. Our forum addresses the market size for the Fortune companies, their special concerns, and the resulting issues that face hardware and software manufacturers, retailers, distributors, and direct sales forces that want to penetrate this market. There's a lot of competition and the big winners will have a clear understanding of their market, and their place within it."

Dr. Portia Isaacson  
President and Chief Executive Officer  
Future Computing Incorporated

Gossip . . .  
(continued from page 1)

that they had made of the original *PC Magazine*, this team - headed up by David Bunnell - was able to quickly hook up with publisher Pat McGovern, reportedly the largest computer publisher in the world. Among other things, he founded and owns *ComputerWorld*, *ISO World*, (a computer trade rag for independent service organizations and dealers), and owns *InfoWorld* (founded by this column's author, several years ago and later sold to Pat).

Pat even owns the first computer periodical to serve mainland China. He also has a batch of radio and television stations, and is deeply involved in information distribution, focusing on computer information.

With Bunnell as Publisher, McGovern has created the newest magazine to focus on the massive IBM PC market - not surprisingly, naming it *PC World*. Having been involved in the computer publishing racket since micros came into existence, we are reasonably aware of McGovern's ample capabilities. We have every reason to believe that his new *PC World* - with its excellent, experienced staff - will be a very strong contender in the race to provide information about the IBM PC and its multitude of compatibles and programs.

### BUNNELL KNOWS WHAT HE'S DOING

*PC World's* Dave Bunnell has been in the publication end of personal computing ever since personal computing existed. He was a tech writer for MITS when MITS President Ed Roberts announced that MITS was going to create a computer in a kit. Dave later became a Vice President of MITS.

He was the first Publisher of *Personal Computing* magazine, back when it was created by Benwill Publications.

He later had the good sense to

move to the San Francisco Bay area (a little provincial myopia, there), which was - and probably still is - the undisputed center of the microcomputing industry. Here, he authored several micro publications on a free-lance basis.

When Tony Gold got the idea to do a publication oriented to the IBM PC, Eddie Currie (Dr. Edward Currie, if you please) who is now Prexy of Lifeboat and used to work with Bunnell at MITS, suggested Dave as the proposed pub's Publisher. Dave took the job, and - in less than a year - built *PC Magazine* into a huge periodical, comparable to Byte's monthly monster encyclopedia.

### ZIFF TIFF OVER PC PUBS

Sadly, it is apparent that Bunnell and the original *PC Magazine* staff were more interested in publishing a great rag, than they were interested in legally delineating their relationship with investor Gold. While Bunnell and the key staff thought they were earning "sweat equity," Gold - and Ziff-Davis - apparently thought the magazine entirely belonged to Gold, and Bunnell, et al, were merely employees.

Gold and the pub's staff disagreed over the way the publication should operate. Acrimony ensued. Gold closed a deal with Ziff-Davis, selling the magazine to Z-D (reportedly for well over \$1 million, plus residuals). And, every key staff member and subject editor walked.

McGovern and this newly unemployed staff quickly struck a deal (this time with legal eagles eyeballing every comma) and *PC World* came into existence. This was less than enchanting to Ziff-Davis.

Now, Z-D is trying to get an injunction against McGovern's using the name *PC World*; there is litigation galore; and plenty of attorneys are soaking up a lot of energy that could much better be spent serving

# “For my money the Computer Faire is the most important show of the year.”

Jerry Pournelle, computer & sci fi author, *Byte*, July, 1982

The Computer Faire is the only micro convention that has had six major write-ups in *Byte* magazine, including two articles about the 7th Computer Faire, last March. It is the largest and best-reputed end-user micro convention in the U.S.

The 7th Computer Faire drew over 36,500, had more than 120 Conference speakers, and over 450 exhibitors.

The 8th West Coast Computer Faire is happening in early '83 at the beginning of San Francisco's Spring season. It is expecting 100 speakers (over 160 Speaker Kits have already been distributed), and had rented all of its 690+ exhibit spaces to over 350 exhibitors three months before the March Faire.

- Major Conference Program

To name a few expected sessions:

Tutorials for Novices  
Educational Computing  
Business Applications  
Biomedical Computing  
Legal Aspects & Applications  
Hardware Design  
Software Packages  
Applications Systems  
Conference Proceedings over 400 pages

- Massive Product Exposition

If it's significant, it's being exhibited.

To name a few products being exhibited:

IBM, Apple, Osborne, Radio Shack, Heath/Zenith, TI, Commodore, RCA, CompuPro, Casio, Unix, PC DOS, CP/M, Oasis, dbase II, SuperCalc, Peachtree, Insoft, Select, *Byte*, *Interface Age*, *Creative Computing*, *InfoWorld*, *Datamation*, *PC World*, *Dr. Dobb's Journal*, *Buss*, *Compute!*, Dialog, Jade, Broderbund, Adventure International, Dysan, 3M, Maxell, On-Line, Software Toolworks, and many, many more.

- User Group & Special Interest Meetings

Including: IBM PC, Apple, Osborne, TRS-80, Heath/Zenith, etc.

- For more information call: Computer Faire, 345 Swett Road, Woodside, CA 94062 (415) 851-7077

## THE 8TH WEST COAST COMPUTER FAIRE

SAN FRANCISCO

CIVIC AUDITORIUM & BROOKS HALL

MARCH 18-20, 1983

## Reston Errs; Says They Will Fix It, But Doesn't Do So

Late last Fall, we received a note from a Computer Faire follower in Australia reporting that he was confused about the 8th Faire dates. He thought, correctly, that the 8th Faire was March 18-20 (as was announced well over a year ago), but had noticed it reported as being March 2-4 in the "1983 Great Computer Calendar", available for \$7.95 from Reston Publishing (a Prentice-Hall company). The calendar contains microworld historical dates, plus dates of upcoming computer events.

We contacted Reston in late November and again in early December, asking that they include an errata sheet with their calendars, and were given strong assurances that they would promptly do so. However, in the middle of January, well over a month after that assurance, we ordered a copy of the calendar, received it, and found no correction and no errata.

Then we started looking at the rest of the contents. We noticed that they reported Wescon as being "WestCon".

They reported that the first issue of *InfoWorld* was published on January 6, 1980. Actually, its first issue was datelined December 11, 1978 under the name of *Intelligent Machines Journal*, and the first issue bearing its current name, *InfoWorld*, was clearly identified as "Volume 2, Number 1," and datelined February 18, 1980.

We did not check to see whether they had gotten the days of the week correct.

An accurate calendar of past and future micro events is certainly an attractive idea. However, Reston's "1983 Great Computer Calendar" obviously does not fit the description.

Additionally, we are less than enchanted with their lack of willingness to promptly correct an error that could cause their readers to spend several thousand dollars to come to San Francisco on the wrong dates, particularly after they specifically assured us that they would do so.

## InfoWorld Product of Year Awards at Faire

This year, the West Coast Computer Faire will again be the site for presentation of "InfoWorld's" prestigious hardware and software Product of the Year awards.

"InfoWorld," The Newsweekly for Microcomputer Users, which is going into its fourth year of publication, has chosen the renowned annual West Coast Computer Faire as the event at which to make its yearly awards.

Nineteen eighty-two's winner of "InfoWorld's" Hardware Product of the Year is the IBM Personal Computer. The Software Product of the Year winner is Multiplan from Microsoft.

## Staff Walks Out on "PC Magazine," Starts New Journal

By Deborah Wise, *InfoWorld* Staff

Las Vegas, NV-Not all the intrigue and excitement at this year's Comdex came from microcomputer software and hardware manufacturers.

On the opening day of the show, CW Communications, publisher of computer-related publications including *InfoWorld* and *Computerworld*, announced it had launched a new company to publish a monthly magazine for IBM Personal Computer users called *PC World*.

The twist to the story is that *PC World* will be run by former staff members of *PC Magazine*, a year-old publication also aimed at IBM Personal Computer users.

A majority of the *PC Magazine* staff resigned two days after that publication came under the control of Ziff-Davis, Inc., a New York City publisher of computer-related publications last month. After they left *PC Magazine*, they approached Patrick J. McGovern, chairman of CW Communications, with the idea for *PC World*.

David Bunnell, who started *PC Magazine* and was its editor, was named publisher and editor-in-chief of *PC World* and president of *PC World* Communications, a newly formed subsidiary of CW Communications.

The rift with Ziff-Davis occurred because *PC Magazine* staff members felt their rights had been violated when the majority stockholder and founder of the magazine, Anthony Gold (who is also a founder of Lifeboat Associates), sold his share of the company to Ziff-Davis.

Last year Gold put up about \$200,000 to start Software Communications, the company that published *PC Magazine*. According to Bunnell, Gold owned 55% of the venture. Bunnell and other staff members controlled the remaining 45%.

The agreement with Gold, which

Bunnell said was in the form of several letters, showed that Bunnell's percentage of the stock would be fully vested over a three-year period. It also said that if during that time a controlling interest in the company was sold, the 45% would revert to Bunnell and his staff immediately.

Over the past four months, *PC Magazine* had been courted by numerous suitors, including CW Communications, Ziff-Davis, CBS Publications, McGraw-Hill Publications and others, Bunnell said. He said all the interested parties, except Ziff-Davis, recognized that Bunnell and his staff controlled 45% of the company. "Ziff-Davis was not our first choice as a buyer."

"Tony Gold promised in writing and orally that he would not conclude a deal with Ziff-Davis until he had (the staff's) approval," Bunnell added.

*PC Magazine* was interested in merging with a larger organization that would help finance its growth, Bunnell said.

"It was a mutually agreed-upon plan between David and me to find somebody who had the publishing and financial resources to develop a very valuable property," said Gold.

Bunnell maintained that his relationship with Tony Gold had been strained because of lack of financial and moral support. "He called us an artistic success and a commercial failure. We felt he didn't care," said Bunnell.

"The morale has been low recently at *PC Magazine*. On November 9, when Tony came to the offices, he harassed the staff so much the entire staff walked out," said Cheryl Woodard, former associate publisher at *PC Magazine*, who was named *PC World's* associate publisher.

Gold would not comment on his relationship with Bunnell and the *PC Magazine* staff. He did say, however, "I sincerely believe my transaction (with Ziff-Davis) didn't disadvantage David".

Ziff-Davis took control of *PC Magazine* on Friday, November 19. Bunnell found out the following Monday. He said he turned up for work to find executives from Ziff-Davis waiting at the *PC Magazine* offices in San Francisco. They informed Bunnell that Ziff-Davis controlled the publication and offered Bunnell and the staff new employment contracts as a substitute for equity, according to Bunnell. "We didn't feel we had a choice but to negotiate," said Bunnell.

Bunnell then approached CW's McGovern.

### No Comment

"The people at *PC Magazine* came to me and said the sale (to Ziff-Davis) was a great surprise and violated agreements they had with the majority shareholder (Tony Gold)," said McGovern. "They said they couldn't in good faith work for the new publisher and said they would resign and asked if they could join our organization."

Ziff-Davis would not comment on the developments, said Larry Sporn, executive vice-president.

At the time this story went to press, no legal action had been taken by any of the parties involved in the negotiations.

The first issue of the new magazine *PC World* is scheduled for January 1983. "The first issue is going to be on second-generation software for the IBM Personal Computer," said Andrew Fluegelman, former associate editor of *PC Magazine*, who was named editor of *PC World*.

Comdex was much the same this year as last for the former staff of *PC Magazine*. In 1981, they cruised the aisles trying to sell the idea for a new magazine, called *PC*, dedicated to the IBM PC user. This year they were doing the same for *PC World*.

Copyright 1982 by Popular Computing, Inc. a subsidiary of CW Communications, Inc., Framingham, MA - Reprinted from *InfoWorld*.

### Gossip . . .

(continued from page 2)  
the community.

Footnote: We do find Z-D's objection to the name of the new publication rather questionable. Having written for this industry since its creation in 1975, we can well testify that "pc" has a long history of generic usage as an abbreviation for "personal computer," dating back to its first use by John Dilks to refer to his first personal computing festival in Atlantic City, that he called "PC'76".

However, reason often has little to do with the law. To lift lines from Heinlein's *Stranger in a Strange Land*, "Straining at gnats and swallowing camels is a required course in law schools."

### GLORIOUS GODBOUT

Wild Bill Godbout - the honcho behind Godbout Electronics and their CompuPro product line - is one of the micro industry's more delightful and notable iconoclasts.

He made his financial nut, back in the early '60's when - as an

EE fresh out of college - he went to work for IBM, joining 'em just when they were stampeding to get a product completed. So, he worked, day and night. So, IBM paid him lots o' overtime. So, he put it in IBM stock . . . which doubled, and doubled again. Q.E.D.

Being just ever so slightly different than your standard 30-year wallflower employee, Bill spun off from Ma IBM to pursue various entrepreneurial ventures. Now, you gotta understand - Bill doesn't just "march to a different drummer." He tells the drummer what syncopation to beat. E.g.:

He started Godbout Electronics as a components mail-order operation. It quickly gained the reputation of being one of the most reliable mail-order operations in the industry. Typical of Godbout, his system operated as follows:

He didn't advertise what he didn't have. (See? That's proof that he's an industry eccentric.) The same day an order arrived, it was shipped. The completed order form was then placed in a shoe box, LIFO (to the

delight of his bookkeeper and the IRS, no doubt).

### GODBOUT MEETS MORROW

When microcomputing came along, he was in a natural position to jump into the newfound micro madness. Bill created an industrial menage a trois - he married his own excellent engineering background, with an absolute demand for high quality, and with the equally competent quality services of friend George Morrow. (At the time, among other things, George was a long-time UC-Berkeley Ph.D. candidate, working on such esoterica as mathematical manifolds. No single-talent individuals in Bill's lashup.) Together, they created some of the best-reputed S-100 goodies in the industry.

(Note: Morrow has since spun off and created top-notch systems under such names as Thinkertoys, Morrow's Microstuff, and - now that the industry has become sadly serious and megabucks motivated, his company has the more sedate name of Morrow Designs. Delightfully however,

(continued on page 10)

# PC WORLD

## Extends a Personal Invitation To Attend PC WORLD Day

*March 19 at the West Coast Computer Faire*

---

### Featuring . . .

An entire day of open seminars, free demonstrations, and panel discussions with some of the most highly respected professionals in the personal computing field

### Find Out What the PC Phenomenon Really Means

- Where Second Generation Software Is Going
- All About PC Systems Software
- All About Multiprocessing and Communications
- What Is PC Compatibility?

Listen to different experts explain how the personal computer is affecting our lives. Meet the editors of PC WORLD, the leading magazine about the IBM Personal Computer and IBM PC Compatibles. Ask them questions and hear them speak on telecommunications, software and hardware, peripherals and many other subjects. Participate in software demonstrations of Qunix, Lotus 1-2-3, MBA and many more. Talk to people who really know the products.

### PC WORLD Day March 19 Program of Events:

Located in the Ballroom of the San Franciscan Hotel, one block from Brooks Hall, San Francisco.

9:30–10:30 a.m.

#### “Systems Software for the PC”

*Panel members:* Chris Larson, director of marketing, MicroSoft; Gary Kildall, president, Digital Research; David Hughes, independent consultant; Sid Garaghty, president, Quantum Software; Al Irvine, engineer, SofTech.

11:00–12:00 p.m.

#### “The PC Phenomenon”

*Panel members:* David Bunnell, president and publisher, PC World; Cheryl Woodward, associate publisher, PC World; Ron Posner, chairman, National Training Systems; Portia Isaacson, president, Future Computer; and Martin Alpert, president, Tecmar.

12:30–2:00 p.m.

#### “Second Generation Software”

*Panel members:* Vern Rayburn, executive vice president, and Mitchell Kapor, president, Lotus Development Corp.; Alan Boyd, product acquisitions manager, Microsoft.

2:30–4:00 p.m.

#### “PC Multiprocessing, Networking, and Communications”

*Panel members:* Andrew Fluegelman, editor, and Steven Cook, technical editor, PC World.

4:30–6:00 p.m.

#### “PC Add-Ons—What Is Compatibility?”

*Panel members:* Rod Kenyon, president, Compaq Computers Corp.; Karl Koessel, programming editor, PC World.

### The West Coast Computer Faire Is March 18, 19, 20

For pre-registration at a discount for 10 or more call Computer Faire (415) 851-7077. Registration at the door for 3 days including conference program and show is \$15.

### Don't Miss PC WORLD Day March 19

Attendance at PC WORLD Day events is free to all participants in the West Coast Computer Faire, but space is limited to the first 500 persons so please come early to ensure you don't miss PC WORLD's presentations.

Also, visit the PC WORLD booth at Brooks Hall. Booth numbers: 1127, 1129, 1131.

# Warren Announces First IBM PC Faire

## Major Product Exhibition and Conference Slated for August 26-28 in San Francisco

The organizers of the West Coast Computer Faires have announced their first "IBM PC Faire," to take place in San Francisco's Civic Auditorium and Brooks Hall, August 26-28, 1983. The IBM PC Faire will focus on hardware, software, and applications for the IBM Personal Computer. It will include a major Technical Conference, a large product exposition, and a number of user group meetings. Organizers project an attendance of 20,000 to 30,000.

### CALL FOR CONFERENCE SPEAKERS

"We have just issued a call for speakers and participation in the Technical Conference of the IBM PC Faire, and expect at least 60 to 120

speakers," said Jim Warren, Faire Chair. "We have always felt that information exchange is the essence of any major computer convention, and put considerable effort into creating a large technical program of well-qualified speakers." The PC Faire will also publish a *Conference Proceedings* expected to exceed 350 pages.

### HOW IT STARTED

"Several months ago, we announced an IBM PC Hall within the 8th Computer Faire, being held this March in San Francisco," said Warren. "We expected a positive response, but frankly, we were amazed. The PC Hall sold out of space in less than 10 days! We now have about two dozen companies on a waiting list for

any possible opening. That's what gave us the idea for the PC Faire."

### MAJOR EXPOSITION EXPECTED

The trade exposition is expected to be comparable in size to the massive exhibitions at the West Coast Computer Faires.

"Almost every PC-oriented company to whom we have mentioned the PC Faire has expressed an immediate, active enthusiasm for the event and has requested exhibit information. They like the focus on the IBM PC; they like the timing, and they like the location," commented Warren. He pointed out that the convention occurs at the best time of the year in one of the nation's most popular tourist cities,

allowing attendees and exhibitors to combine business with their summer vacations.

### LARGE ATTENDANCE LIKELY

"We drew over 36,500 to the 7th Computer Faire, last Spring, and are expecting well over 40,000 for the 8th Faire, this March," Warren observed. "Every time I've mentioned plans for the PC Faire to computer groups, I have encountered nothing but active interest and enthusiasm. Based on this response, our drawing ability for the Spring Computer Faires, and the 105,000-circulation of the Faire's *Silicon Gulch Gazette* newspaper - heavily biased to the west coast - I feel our 20K to 30K attendance projection is very reasonable."

## Best-Known Micro Industry Analyst Comments on Computer Faires

Dr. Portia Isaacson, President of Future Computing, Inc., and one of the microcomputer industry's best-known market analysts, has issued the following statement:

"Jim Warren's IBM PC Faire will make a major positive contribution to the IBM Personal Computer industry and to the microcomputer user community, as have his annual West Coast Computer Faires of the past half decade. I recommend attending, exhibiting, and speaking at the IBM PC Faire in San Francisco, next

August [August 26-28, 1983]."

She went on to state: "I also regard Warren's West Coast Computer Faire to be one of the three or four most significant computer conventions each year, because it always offers an unusually large number of introductions of particularly innovative new products."

Dr. Isaacson's market analysis group, Future Computing, is the only market research firm that specializes exclusively in the personal computing marketplace.

## Tax Cut Software for IBM PC

It's possible for users to save money on both federal taxes and tax preparation services with TaxCut, a new software program for personal computers.

For tax planning purposes, TaxCut allows users to test outcomes of hundreds of tax-related alternatives. Then, when the data is entered, the taxpayer can print out the complete return—including many schedules which will be ready to sign and mail.

Examples of tax-related decisions TaxCut can handle are IRA's, Keogh plans, and investment in business equipment. The package will quickly

project figures for income averaging, installment sales, investment credit, and others.

All provisions of the latest laws are incorporated including the new deduction for married couples who both work, all savers certificates, charitable contributions for those who don't itemize, and more.

The TaxCut software was designed for the IBM Personal Computer and is currently being converted to the Apple II and CPM-80.

The TaxCut diskette costs \$250. For more information, contact: United Micro Systems, Inc., P.O. Box 3035, Tucson, AZ 85702, (800)-972-7479.

## PC WORLD DAY AT THE FAIRE

March 19th at the West Coast Computer Faire *PC World* magazine will present an entire day of demonstrations, seminars, and panel discussions with some of the most highly respected professionals in the microcomputing field.

Find out what the PC phenomenon really means, where second generation software is going, all about PC Systems Software, and all about multiprocessing and communications. Participate in software demonstrations like Qunix, Lotus 1, 2, 3, MBA, and many more. You will talk to the people who know the products.

Listen to what these people have to say about personal computers: Portia Isaacson, President of Future Computing; Martin Alpert, President of Tecmar; David Bunnell, President and Publisher of *PC World*; Ron Posner, Chairman of National Training Systems; Andrew Fluegelman, Editor of *PC World*; Gary Kildall, President of Digital Research; Chuck Irvine, Chief Engineer of SofTech

Microsystems; Chris Larsen of Microsoft; Mitchell Kapor and Vern Rayburn of Lotus Development Corporation; Alan Boyd, Product Acquisitions Manager of Microsoft; Rod Kenyon of Compac Portable Computers; Steven Cook, Senior Technical Editor, and Karl Koessel, Programming Editor from *PC World*.

Meet all the editors from *PC World* magazine. Ask them questions, hear them speak on telecommunications, software and hardware, peripherals, and much more.

*PC World* Day events will be held in the ballroom of the San Franciscan Hotel, one block from Brooks Hall. *PC World* Day will be held March 19th in conjunction with the 8th West Coast Computer Faire. Registration for three days, including Conference and the show, is \$15. For more information and pre-registration prices, contact: Computer Faire, (415) 851-7077.

### Conference Session

## Copyright and Software

Many people put a copyright notice on their software but never actually register it with the U.S. Copyright Office, according to Attorney Daniel Remer, whose 8th Faire talk will be "Registering with the U.S. Copyright Office." Copyright registration is easy, inexpensive, and doesn't require a lawyer - so why don't more people do it?

"There are two reasons besides sheer laziness," says Remer. "The first is that some lawyers recommend that software only be registered if and when there is an infringement."

The second reason that people refuse to register has to do with the fear of making the source code of the program accessible to the public."

Remer's talk will guide programmers through the paperwork necessary to register a copyright in software and discuss registration timing, as well as source code privacy considerations.

### Conference Session

## Financing with R&D Partnerships

Research and Development partnerships, an increasingly popular form of financing for new businesses and projects in ongoing concerns, will be discussed by Attorney Michael Harrison in "Financing Hardware and Software Development Through R&D Partnerships."

"The popularity of R&D partnerships stems from the several tax benefits which are available to investors including current expensing of costs associated with research and development, treatment of royalty income on a capital gains basis, and the possibility of investment tax credits on R&D expenses," he says.

Harrison, a partner in Harrison, Hearn and Berthold, San Jose, California, will survey the benefits of R&D financing for software and hardware projects. Tax considerations and the security law framework will be outlined for this attractive investment vehicle.

# Apple II Game Teaches Anatomy

Synergistic Software has produced a new type of educational game for the Apple II. "Microbe: The Anatomical Adventure" combines elements of fantasy adventure, arcade action, and accurate medical science.

## Pascal and UCSD p-System to be Detailed in 2-Day Program at 8th Computer Faire

Windsor Brown, the Vice-President of USUS (the UCSD Pascal Independent user's group), has put together a massive technical conference on the UCSD system. Speakers will offer a half-day introduction to Pascal and another half-day intro to the p-System. Others will detail the background of p-machine architecture, and discuss the advanced UCSD Pascal language. Still others will address efficiency issues in p-system programs, and discuss Modula-2. The two-day program will conclude with an Expert User Panel offering attendees the opportunity to address additional issues.

The game has three different levels depending upon the educational level of the players. On the first level the game can be played as a classic adventure game, the goal being to explore the maze-like human body and overcome obstacles while solving the medical problem. On the second level players can learn facts about health care, personal safety, anatomy, and medicine while playing the game. The third level is for college level science students, premeds, and medical students. Playing "Microbe: The Anatomical Adventure" will aid players in learning human anatomy and medical data. Players must know what drugs to prescribe and what immunity levels, blood pressure, heart rates, etc. are healthy or dangerous. The game can be played alone or with a group.

"Microbe: The Anatomical Adventure" costs \$44.95. For more information, contact: Synergistic Software, 830 N.Riverside Dr., #201, Renton, WA 98055, (206)-226-3216.

# Clarkson College to Issue Computers to Student Body

Clarkson College, Potsdam, New York, will provide desktop computers to all incoming freshmen, beginning this Fall.

Clarkson College has selected Zenith Data Systems Corporation's Z100 desktop computers and the subsidiary of Zenith Radio Corporation will be supplying more than 1,000 computers each year for the next four years. The retail value is estimated to be in excess of \$3.7 million annually.

"This is something colleges and universities have been talking about for years," said David Bray, dean of Clarkson's Educational Computing Systems. "If all goes as planned, in the course of time every student at Clarkson will have their own microcomputer and be linked to a campus-wide network.

"We considered everything from Apple to Zenith in our search and in terms of price, quality, capabilities, and expandability Zenith's Z100 had it all," he said. "Especially important was the ability of the system to interface with the school's mainframe computer, an IBM 4341," said Bray.

Clarkson selected the Z100 low-profile model with a single diskette drive and monochrome graphics. A Zenith high-resolution, 12 inch green monochrome display with a 25 line by 80 character display is also being supplied.

Software being provided includes the CP/M 85 and ZDOS operating system software to run the computer, as well as Z-Basic software for graphics, Fortran and Cobol languages for writing programs, and Multiplan—an electronic worksheet for quick calculations and forecasts.

The Zenith Z100 individually controls 640 dots on 225 lines, a total of 144,000 dots. Creation of three dimensional images of objects, charts and graphs is possible and the unit can be upgraded for color graphics.

The Zenith computer has two microprocessors to run 8-bit software, is widely available on the market, and has 16-bit software. It uses an industry standard expansion structure called the S100 bus with four open slots to permit other computer equipment to operate with the Zenith computer.

Suggested retail price for each unit is less than \$3400. The cost of the computer is being subsidized by restricted grants and students will pay \$200 each semester plus an initial one-time maintenance fee of \$200. At graduation the students will own their computers.

Clarkson is an independent coeducational college with undergraduate programs in engineering, management, and science. The school was founded in 1896 and currently has about 4,000 students enrolled.

Every designer sometimes wishes to test and refine his system before committing it to fabrication...

## TUTSIM

### SIMULATION WITH TUTSIM MAKES IT POSSIBLE!

Developed at Twente University of Technology, the Netherlands. Proven in ten years of use in research. Now available for your microcomputer.

Applications include electro-mechanical systems, thermodynamic processes, electronics, batch chemical processes, physiological and biological systems, econometrics, etc.

TUTSIM allows easy model entry for any system you can describe in equations, block diagrams, or bondgraph form.

TUTSIM features graphical output and friendly user interaction.

## Learning Music at the Computer

"The future for learning music at the computer is bright indeed. At some point in the future, one could expect people to buy a microcomputer just to learn to play the piano even as many now buy a microcomputer just to play Pac Man or Visicalc. Certainly it is now possible to gain a certain level of musical training by adding a few pieces of equipment to an existing home computer," say music educators Wolfgang Kuhn and Paul Lorton.

In their 8th Faire talk, "Learning Music at the Computer," Kuhn and Lorton, of Stanford University and the University of San Francisco respectively, will discuss current trends in computer music education. They will also comment on whether quality music education is available through microcomputers, using today's hardware and software.

"The most important caution is that the fact that a microcomputer can make musical sound of a form and can produce graphic displays which resemble musical notation does not

mean that they are effective devices with which to learn music. Seeing primitive notation and listening to single voice square wave tunes will not train young musicians," warn the educators.

## TRS-80 Educational Grants Program

Radio Shack is setting the subject for proposals in the fourth submission cycle of the company's Tandy TRS-80 Educational Grants Program as "Unique and Innovative Microcomputer Applications in Education." Deadline for submissions under this theme is March 31, 1983.

Through the program, TRS-80 hardware, software, courseware and related products totaling \$500,000 per year will be awarded to individuals and non-profit organizations whose proposals are selected in four quarterly cycles as providing the greatest benefit to the American educational community under selected proposal themes.

Information kits are available by written request only from: Tandy TRS-80 Educational Grants Program, Radio Shack Education Division, 400 Tandy Atrium, Fort Worth, TX 76102.

### Faire Smoking

By city ordinance, smoking is permitted only in the entrance lobby of the Civic Auditorium. It is explicitly prohibited in the conference halls, perhaps due to limited ventilation.

# Educational Computing Major Topic in Faire Conference Program

The 8th West Coast Computer Faire will feature a major Conference Session on computers and education.

Teaching young children important educational concepts will be discussed in "Young Children Use Computer Graphics," by Anne Piestrup of The Learning Company in Portola Valley, California, and "Using the Microcomputer for Teaching Pre-Math Concepts to Young Preschoolers," by a team of educators from Texas Tech University in Lubbock, Texas.

Educators will have a chance to teach each other when speakers deliver talks on evaluating educational software, setting up a school mini-computer system, and a new computer language for teaching and industrial training.

In "Evaluating Educational Software," computer lab coordinator, Glee Cathcart will detail features to examine when selecting educational software. Leonard Meuer and Marilyn E. Clinger will describe the implementation of a computer system that dramatically changed computer usage and administrative data processing in a California school district in "Micros to Mini."

H.L. Gray and Alan Elliot will introduce a Computer Assisted Learning Language (CALL) for the IBM PC.

"The second generation of CAI programs will concentrate on making the task of authoring computer assisted instruction easier through menu driven authoring systems. The

CALL program is an example of such a system," say Gray and Elliot.

Unusual applications of computers in education will be discussed in "Learning Music at the Computer," by Wolfgang Kuhn and Paul Lorton, and "Computers for Exceptional Children: When is the Wedding?" by Dee Johnson, Cleborne Maddux, and Jerry Willis of Texas Tech University.

The educators from Texas will speak on the need for the computer industry and the educational community to unite in their efforts to

produce good educational products. Unless a solid working relationship is formed, they say, the "most dire predictions will come to pass: we will end up with a scrap heap of electronic parts and discarded diskettes in our public schools."

Computer literacy will be the topic of two talks at the Faire, "Computer Tutor Project: Computer Literacy in the School" by Joan Targ and "Computer Prep: Considerations for a Pre-College Computer Science Curriculum" by Monty Swiryn. The speakers, who are from the San Fran-

cisco Bay area will discuss the state of computer literacy and whether students who wish a computer related career are being adequately trained.

In "Goodbye Gutenberg? Books or Bytes?" Elizabeth Wall will describe how books are being used with computers for more effective learning. Instead of replacing books, computers can become partners with them in the educational process, she says. Wall will review current books available to help teachers and students with computer awareness, programming, and applications.

## Conference Sessions

### Computers and Special Education

The growing role of computers in special education will be addressed by a large number of talks at the 8th Faire.

"The Role of Computers in Special Education" will be reviewed by Ann C. Candler of Texas Tech University. Computerized drill and practice, discovery learning, and specific software will be considered.

Another overview of computers and special education will be presented by Cleborne Maddux and Dee Johnson in "The Future of Microcomputing and the Handicap of Learning Disabilities."

Specific equipment, such as the Optacon, VersaBraille, and speech output systems, will be reviewed in "What can Computers do for the Visually Handicapped?" The speakers, Virginia Sowell and Vivian Correa of Texas Tech University, will discuss the value and implications of using computers with the visually handicapped.

"Computer Usage with the Severely/Multi-Handicapped" will be the topic discussed by Thomas and Donna Irons of Texas Tech University. The educators assert that "access to a carefully selected and highly adapted personal microcomputer is equivalent to the acquiring of vision, hearing, or physical dexterity" for the severely handicapped.

# Will this year's bells and whistles be next year's hoots and howls?

#### NOT IF IT'S A GIFFORD.

Freedom from obsolescence now costs less than \$10,000 for 3 users. Because Gifford Multi-User Computer Systems, based on industry standard IEEE 696/S-100 with 20 bus slots, allow ample expandability and upgradability as new processors and peripherals are introduced. For example, up to four additional users can be added for only \$600 each, plus terminal costs. All while protecting your investment.

That's why Gifford computer systems, with their dual processor CompuPro CPUs, have proven themselves to be THE

SYSTEM for business and technical professionals requiring obsolescence-proof, hard-disk computers.

#### GIFFORD GIVES YOU THE BEST OF TWO SOFTWARE WORLDS.

We were the first company to develop a system that runs any combination of 8 and 16 bit CP/M™ programs simultaneously. So, if you go with Gifford, you'll know you can use the thousands of 8 bit CP/M programs available, PLUS any of the more powerful 16 bit programs ... at the same time.

And, in addition to compatibility with all the CP/M software that's out there, you also get Super-Calc-86™ dBase II™ and MP/M-86™ FREE.

#### PRICELESS INFORMATION FOR THE PRICE OF A STAMP.

We invite you to cut out the coupon and mail it to us today. We'll send you a free brochure with detailed information regarding all the other advantages of going with Gifford. Such as, our exclusive networking and multi-tasking telecommunications packages, our two year warranty, complete service and support, system integration and custom application software. Plus all the benefits of selecting an IEEE 696/S-100 bus-based system.

MP/M 8-16 is a proprietary implementation of MP/M-86 and was configured for CompuPro by Gifford Computer Systems. CP/M and MP/M are registered trademarks of Digital Research. Super-Calc is a trademark of Sorcim. dBase II is a trademark of Ashton-Tate. CompuPro is a trademark of Godbout Electronics. Prices and specifications subject to change.

Other centers opening soon nationwide.

## Computer Toolbox for the Physician

"A Computer Toolbox for the Resident Physician" is the title of a talk to be presented at the 8th West Coast Computer Faire by Richard Dean Kirkham of David Grant Medical Center, Travis Air Force Base, Vallejo, California.

Kirkham will examine the design of a medical information system from the viewpoint of a physician user.

A physician user of a medical information system would have rapid access to lab and x-ray results, and could reduce paperwork on patient admissions, examinations, and discharges, says Kirkham. Programs could help the physician in designing the therapeutic work-up and regimen, or could review prescribed medications for possible drug interactions.

Kirkham sees the encouragement of individual research as the real bonus of medical computing, as residents become able to create their own databases on topics of individual interest.

Conference Session

## Computerized Typesetting

"You can typeset your own newspaper, using your computer and an inexpensive matrix printer," says Bill Mc Laughlin. He'll describe his graphics program during his talk at the 8th Computer Faire, "Typeset Newspaper on Computer."

Mc Laughlin sees many uses for his production methods, including company ads, newsletters, and club brochures or publications. His presentation will include a technical "how to" explanation, aimed at helping others get started on their own production projects.

## Graphics Enhancement Package for Viewpoint Terminals

Users who own Adds Viewpoint and Viewpoint/3A Plus alphanumeric terminals can now buy a fully compatible Gen.II Retro-Graphics terminal enhancement package from Digital Engineering to convert to full bitmap graphics capability.

A second-generation product line, Gen.II Retro-Graphics features full emulation of the Tektronix 4010 Series of graphics terminals and monochromatic emulation of the graphics functions of the Tek 4027

color graphics terminal. A printed circuit board assembly, Gen.II is powered by an 8-bit microprocessor and provides a screen resolution of 640 by 240 pixels. Once installed, Retro-Graphics does not affect the normal alphanumeric functions of the Adds Viewpoint terminals.

The model RG1000/AD60 Gen.II Retro-Graphics enhancement costs \$1095. For more information, contact: Digital Engineering, Inc., 630 Bercut Dr., Sacramento, CA 95814 (916)-447-7600.

**Gossip . . .**  
(continued from page 4)  
George continues his dedication to very high quality.)

Ever wonder why Godbout Electronics has the unlikely address of the "Oakland Airport?" Oh, that's 'cause Bill is also an flying junkie. So, of course, he owns a flying service. Who knows, it might even be profitable.

There's also an operational B-29 parked at the Oakland Airport, owned and operated by a nonprofit aircraft historical society, of which Godbout is a member.

And, as a final note, Bill also owns a small piece of an Oakland restaurant. It seems that someone once told him, "Own a restaurant, and you will never go hungry." Like everything else he is connected with, the food is top quality.

### COMPETENT COMPUPRO

Actually, our recent acquisition of some Godbout gear was what brought Bill to mind as we wrote this column.

Being inveterate computer fanatics, our offices are heavily computerized. Being heavily computerized, we needed a definitively reliable microcomputer system. And, being reasonably knowledgeable of micros, we grabbed a coupla Godbout/CompuPro half-megabyte dual-processor systems.

Following the adamant advice we give to prospective computer buyers, we got them through a local dealer - G&G Engineering of San Leandro, who are well worth prominent mention. Run by Mike and Dale Gifford, G&G is much more than just another CompuPro dealer - they are the heavy computer hackers who performed the noticably nontrivial task of making CP/M-80, plus CP/M-86, plus multiuser MP/M all run on the CompuPro 8085/8088 system (including a 20MB Fuji winnie) - giving that whole mess the name of MP/M-8/16.

The really nice thing about this dual processor 8-bit/16-bit system is that you can take advantage of all the old, robust, well-debugged 8-bit software that has been around for several years, plus have access to the mountain of explosively developing 16-bit software that is becoming

(continued on page 18)

## VisiCalc® & SuperCalc® Users:

**NEW!**

### How to Use SuperCalc®

Deborrah Smithy-Willis,  
Jerry Willis & Merl Miller

This book handily introduces you to the versatility of the SuperCalc program. It includes: an introduction to electronic spreadsheets and what they can do; a tutorial on SuperCalc and its applications; and a reference section which contains all the SuperCalc commands, functions and formulas, plus how you can easily use them.

Book: 104 pages \$19.95

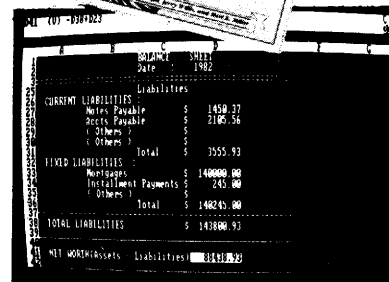

### 32 VisiCalc Worksheets®

Ted Lewis

Are you a VisiCalc user? Now you can expand your VisiCalc horizons with these versatile worksheets! For example: Health Questionnaire \* Quarterly Income Statement \* Depreciation Schedule \* Calorie Chart \* Personal Energy Chart \* Fruit Canning Aid \* Energy Use of Appliances \* Teachers Grade Book \* Models \* Installment Payments \* Interest Accrued on Savings Account \* Balance Sheet \* and more!

Programs can be typed into your computer or are available on diskette.

Book: 268 pages \$19.95  
Book/Software Package: Apple II \$29.95

Please send me the book(s) I have indicated. I understand I may return for a complete refund if I am not satisfied.

### Note: CHILDREN AT THE FAIRE

The Computer Faire is a conference and trade exposition about computing and information processing. It is designed for mature individuals who have a sincere interest in learning about (or learning more about) computing, information management, computers, and "the information society".

These topics are presented at the Faire, presented by adults, and presented for adults . . . and mature, seriously interested young people and students. Although the Faire includes some element of entertainment and occasional electronic games, the Faire is not appropriate for children nor for immature young people. (Among other things, this is reflected in the single registration fee, for adults.)

Parents and teachers are discouraged from bringing immature individuals to the Faire. To do so is unfair to the other attendees, unfair to the speakers, unfair to the exhibitors, . . . and unfair to the children.

Therefore:  
Children found playing or otherwise causing a disturbance in the convention center may be ejected from the building - just as they would if they were being disruptive in a university classroom, business office, engineering lab, or training seminar (or, for that matter, in a theatre, play, or symphony). The park in front of the Auditorium may be appropriate for children's play; the Faire is not.

# Inexpensive Videotape Tutorials For New Computer Users

Videotape well may be the wave of the future for providing introductory tutorials to users of new computer systems and software. With over three million video cassette recorders (VCR's) in the U.S., this is a hot new area for computer instruction.

## PRODUCT-SPECIFIC INSTRUCTION

Video Initiative, a division of Initiative, Inc. (II), of Woodside, California, is producing such tapes. Within the next several months, they will complete a number of tutorial tapes, including ones covering such topics as: VisiCalc, the IBM PC, CP/M, etc.

These tapes are not vague overviews. They provide explicit instruction about specific systems - e.g. Advanced VisiCalc on the Apple III, or a new user's introduction to the IBM Personal Computer. Each tape is accompanied by a workbook, to be used with the tape, to further enhance the effectiveness and impact of the instruction. Each tape is designed for use by a single individual who can start and stop the VCR as they are watching the tape, performing the exercises on their computer, and using the accompanying workbook.

## INDEPENDENT OF VENDORS

Video Initiative's tapes are straight instructional tapes; not promotional tapes from vendors of the hardware and software being presented. Although the writing and production teams are working closely with the product vendors to assure accuracy and timeliness of the material, Video Initiative is entirely responsible for the production of their tapes.

Initiative, Inc. founder Jim Warren commented, "We are establishing ourselves as an excellent source of high-quality, independently-produced information detailing how to use computer hardware and software. We value that reputation, and fully expect to enhance it with this video venture."

## HIGH-QUALITY VIDEO WORK

Each tape is - as they say in the television industry - "highly produced." That is, the production techniques that are customary and expected in first-rate television documentaries are being used in these tapes. These include use of voice-over, freeze-frame, split screen, close-ups, special effects, and much more, to maximize the efficient and effective presentation of information to the new user of a computer or specific piece of software.

This is a far cry from some of the early tapes this industry has seen, that were little more than a lecturer giving a chalk-talk before a camera.

## VIDEO INITIATIVE HAS COMPUTER & VIDEO EXPERTS

Initiative, Inc., was created by Jim Warren, a long-time computer professional, well known in microcomputer circles. He has been a computer consultant in the San Francisco Bay area since the late '60's.

Warren has well over ten years' teaching experience. He was first involved in computer education around 1960, working on a high school student enrichment program using an old, drum-memory IBM-650. He

has taught in Stanford's Computer Science Department as well as at San Jose State and San Francisco State. He has taught over commercial television (KPIX-TV, San Francisco) and taught a number of computer courses over Stanford's closed-circuit Engineering School television system that serves much of Silicon Valley. He holds two graduate degrees in computing (Stanford, and University of California), and two more degrees in mathematics.

And, he has hosted the "Computer Chronicles," the first weekly television show to presume a computer-

literate audience. It has now aired on about 40 PBS affiliates, throughout the U.S.

Video Initiative's Producer is David Carlson. Carlson has worked in documentary and instructional television for years, including stints with the McNeil-Lehrer Report and a number of projects for the College of San Mateo - one of the best-known junior colleges in the San Francisco Bay area.

Similarly, Director Dave Ratto has considerable experience in high-quality video production. Warren commented, "Dave Ratto is as much

of a video fanatic as I am a computer fanatic. His abilities in directing and using video technology for top-notch results are really impressive."

Warren's video group is working closely with industry writers in scripting the instructional videotapes and in creating the workbooks. Among others, they have been working with Lasselle-Ramsay, a writing and training team that recently spun off from Hewlett-Packard where they had extensive experience in both training and documentation.

Video Initiative is at 345 Swett Road, Woodside CA 94062.

## ANNOUNCING... A NEW USER SERIES FOR THE IBM PERSONAL COMPUTER

Designed to introduce and explain basic programming languages, machine functions and user applications, from beginning through moderately advanced. Each text includes a broad range of examples, programs and exercises to encourage familiarity and creativity with the new, trend-setting IBM personal computer.

Seymour V. Pollack

Programming the IBM  
Personal Computer:

UCSD  
PASCAL

Neill Graham

Programming the IBM  
Personal Computer:

BASIC

Robert Rouse  
& Thomas Bugnitz

Programming the IBM  
Personal Computer:

Fortran 77

David E. Cortesi

Your IBM  
Personal Computer:

Basic and  
Applications

### PROGRAMMING THE IBM PERSONAL COMPUTER: UCSD PASCAL

Seymour Pollack, 256 pp., paper \$16.95 ISBN-0-03-062637-4  
"The Portable IBM PC Pascal!" Emphasizes the syntax of UCSD Pascal and good program design. An ideal introductory text/tutorial to be used informally, or in classroom or training situations. Includes full coverage of the system and its uses, basic and advanced UCSD p-System™ functions. Easy to understand, user-oriented, reinforces working knowledge and application.

### PROGRAMMING THE IBM PERSONAL COMPUTER: BASIC

Neill Graham, 256 pp., paper \$16.95 ISBN-0-03-061911-4  
An introduction to programming in BASIC language. Users can apply material directly to their machine, with no adaptation necessary. An ideal introductory text/tutorial to be used informally, or in classroom or training situations. Covers the unique features of the IBM Personal Computer, elements of BASIC and programming, and various applications (text editor programs, program for storing and retrieving information from random files, etc.).

### PROGRAMMING THE IBM PERSONAL COMPUTER: FORTRAN 77

Robert Rouse & Thomas Bugnitz, 304 pp., paper \$16.95 ISBN-0-03-062042-2  
Examples, problems and exercises drawn from the sciences and engineering teach the Fortran 77 language on the IBM Personal Computer. An ideal introductory text/tutorial to be used informally, or in classroom or training situations. Introductory and advanced topics, with special emphasis on use of IBM's unique Fortran Compiler.

### YOUR IBM PERSONAL COMPUTER: BASIC AND APPLICATIONS

David Cortesi, 304 pp., paper \$16.95 ISBN-0-03-061979-3  
Intended to get the first-time user over the hurdle of the initial introduction to the new machine. Provides a non-threatening, "confidence-building" introduction to the Personal Computer and to computing, basic language and software (VisiCalc®, word processing, etc.). An ideal introductory text/tutorial to be used informally, or in classroom or training situations. Focuses on central programming concepts, emphasizing IBM's version of MICROSOFT BASIC.

# 8th West Coast Computer Faire Conference Speakers

*This is a partial list of Faire speakers. Papers submitted by these speakers have already been accepted. A number of other papers that have been submitted are currently completing the refereeing process.*

## **Use Of Computers In Churches**

George M. Aldridge,  
Fairfield, CA

## **Enhancements and Compatibility of the Apple IIe from the Apple II+**

Peter Baum, Technical Support,  
Apple Computer M/S 22-J,  
Cupertino, CA

## **Preventive Maintenance**

James S. Brannick,  
Fremont, CA

## **On Writing Simulators and the Use of Macros**

Greg Bryant & Joshua Gordon,  
Virtual Microsystems,  
Berkeley, CA

## **Astronomy On Your Home Computer**

Eric Burgess, F.R.A.S.,  
Santa Rosa, CA

## **The Role of Computers in Special Education**

Ann C. Candler, Assoc. Prof. & Charlotte Horner, Doc. Cand.,  
Texas Tech University,  
Lubbock, TX

## **Metacompiler - The Ultimate Forth Tool**

John J. Cassady,  
Forth Age,  
Oakland, CA

## **Evaluating Educational Software**

Glee Cathcart, Computer Lab Coordinator,  
Morrill Middle School,  
San Jose, CA

## **Simulation: See For Yourself**

Edward Cherlin, District Sales Manager,  
InfoSoft Computers,  
Palo Alto, CA

## **Using a PAL to Emulate the Internal State Counter of the MMI 'S516 LSI**

### **Multiplier/Divider**

Vincent J. Coli, Applications Engineer,  
Monolithic Memories,  
Sunnyvale, CA

## **Your Role in Computer Book Publishing**

Raymond A. Collins, Editorial Vice President,  
TAB Books,  
Blue Ridge Summit, PA

## **Microprocessor Based Aids for Employment that Handicapped Persons Need**

### **Now**

Susan H. Phillips, Dir. of Dev. & Sharon Connor CEDP Prog. Mgr.,  
Sensory Aids Foundation,  
Palo Alto, CA

## **Role of Software Requirements**

Russell A. Cook,  
System Analysis Engineer,  
San Jose, CA

## **On Starting A Computer Camp**

Thomas P. Copley, Ph.D. Exec. Dir.,  
Yellow Springs Computer Camp,  
Yellow Springs, OH

## **What Can Computers Do For The Visually Handicapped?**

Virginia Sowell, Assoc. Prof. & Vivian I. Corra, Lecturer,  
Texas Tech University/College of Education,  
Lubbock, TX

## **Microcomputer Applications for Individuals with Fine Motor Impairments**

Dennis Dahlquist, M.S. & Ann Preszler, M.A.,  
Assistive Device Center,  
Sacramento, CA

(408) 336-5048

# FAIRE TERRITORY

Conference Session

## Make Money with Your Computer

"Many people are torn between a vision of a computer as a toy, an educational aid, a hobby and a money-making tool. For those who want to get the most economic benefit from a computer a major perceptual reorientation is necessary," says Robert Ramers, President of Computer Alternatives in San Rafael, California. "If you can develop a mental discipline which allows you to think of a computer in the same way you would think of a bulldozer if you were planning to build a house, you are on the way to developing the mental attitude necessary to make money with a computer."

In his 8th Faire talk, "How to Make Money With a Computer," Ramers will tell listeners how to make money with a computer whether you use it in an existing business or want to start a computer-based business of your own. He will discuss how to know if you're a hobbyist or business person, how to choose your equipment and define your money-making objectives, how to identify the lowest and highest paying computer applications, and more. He will also report on the tax benefits involved in financing your computer with a purchase/lease agreement.

## Dual Tasking Forth

Dual Tasking Forth by Timin Engineering is a microcomputer language that permits simultaneous execution of two programs. Typical uses include machine and process control, data logging, and mathematical modeling. The user may write such a program in Forth, run it, and then continue to use the Forth system for other uses. Normal program development activities may be continued while the background task is executing. Two different programs may be run concurrently. The foreground task may be used to monitor and control the background task.

a pseudo-real-time-clock value which may be used for event synchronization or other purposes. Less than ten percent of processor time is devoted to the Dual Tasking function, and extra memory is required.

All facilities of Timin Forth release 3 are included, such as the Visual Editor and the CP/M Utility package. (Timin Forth release 3 is a superset of Fig Forth.)

Timin Dual Tasking Forth will run on Z-80 hardware systems with at least 32K RAM and any version of CP/M or CDOS. Dual Tasking Forth costs \$285.

No interrupts or real time clocks are required, although they may be used if desired. The system produces

For more information, contact: Timin Engineering Co., 6044 Erlanger St., San Diego, CA 92122, (714)-455-9008.

## Real Estate Software

Real Estate Analysis, from Digital Marketing, is a new program based on large mainframe routines used by institutional investors, yet designed for the individual investor. It is geared for financial advisors, developers, architects, attorneys or real estate brokers. The program is available for personal desktop microcomputer systems using the CP/M operating system.

Real Estate Analysis forecasts one investment for one-to-ten years under different criteria, such as price, loans, income, etc. From user-supplied data, it will project: gross income, operating expenses, resale value, pre-tax cash flow, after-tax cash flow, loan analysis data, and depreciation data. Real Estate Analysis was developed and tested in a commercial real estate practice on properties ranging from \$300,000 to \$14,000,000. It costs \$195.

For more information, contact: Digital Marketing Corp., 2670 Cherry La., Walnut Creek, CA 94596, (415)-938-2880.

## Apple Statistical Analysis System

SoftCorp International, Inc. has introduced speedStat, a statistical analysis system for Apple II computers. SpeedStat Volume 1: Frequencies & Crosstabs, has a capacity of over 10,000 data points and over 30 different statistical measures. Designed for small business and professional users, the system assumes no computer background.

SpeedStat requires an Apple II or Apple II Plus with 48K and two disk drives. It costs \$250. For more information, contact: SoftCorp International, Inc., 229 Huber Village Blvd., Westerville, OH 43081, (800)-543-1350.

## Security Symposium

The 1983 Symposium on Security and Privacy sponsored by the IEEE Computer Society will take place April 25-27, 1983, at the Claremont Hotel in Oakland/Berkeley, California.

For more information, contact: IEEE, P.O. Box 639, Silver Spring, MD 20901, (301)-589-3386.

Conference Session

## Quill Pens have no Downtime

"The computerization of American business may well cause the major managerial crisis of the decade, due not to problems of hardware or software, but to personnel disasters resulting directly from employee resistance," says Sanford B. Weinberg, head of the Administrative Sciences Department of St. Joseph's University in Philadelphia.

In his 8th Faire talk, "Quill Pens have no Downtime," Weinberg will discuss fear of machines, or cyberphobia, and six ways managers can reduce employee resistance to computers. He will explain the importance of giving employees a voice in computer decisions and of considering all the options before buying a computer system. He will also discuss worker retraining, system implementation, and documentation.

"Much like the frustration of leading a horse to water, we can effectively bring automated machines into a vast variety of corporate settings, but getting employees to drink of the information resources computers can make available is a challenge still yet to be met," says Weinberg.

Conference Session

## Micros and the Learning Disabled

Children with learning disabilities may have a new chance in mainstream education now through the use of microcomputers. If "active," rather than "passive," uses of microcomputers with learning disabled (LD) children are developed, the great potential of microcomputers may be realized, say some special educators.

Cleborne Maddux, Ph.D., and Dee LaMont Johnson, Ph.D., both of Texas Tech University, will define "The Future of Microcomputing and the Handicap of Learning Disabilities" at the 8th Faire.

Involving LD children actively as programmers using the Logo language, as writers using word processing, and in simulation programs, can lead them through a series of situations which they would not normally experience, explain Maddux and Johnson.

"It is important for the involvement to be 'active' in order for it to make a difference in the way children think," claim the authors. "The microcomputer should be more than an expensive secretary."

# Vector Users 'Conect' with Public Databases

One of the major uses of small business computers is the ability to access the wealth of information provided by public databases. To help its system users tap this information, Vector Graphic, Inc. has introduced the Conect communications package.

Using the various public information services, Conect users have access to information about stocks, bonds, mutual funds, news, weather, science, technology, and entertainment.

Besides access to the public databases, the terminal software allows Vector microcomputers to communicate with other Vector systems, with larger mini and mainframe computers, time sharing services, and electronic mail.

Conect runs on all Vector systems including the new Vector 4 8/16-bit dual processor business computer, and the software provides asynchronous data communications in any one of four basic operating modes.

In the interactive mode, a Vector microcomputer can communicate

with minicomputers or mainframe systems without any special software at the host end of the link. It is also in this mode that the software allows access to the databases.

In the send/receive mode, data files can be transmitted between any two Vector systems equipped with Conect and the link mode allows transfer of files or programs between computers, has the support necessary for remote diagnostics, and permits the implementation of bulletin boards on Vector systems.

The terminal mode configures the Vector system to emulate Hazeltine 1500 dumb terminal, converting the microcomputer into an interactive communications terminal that can send or receive data.

Vector systems using Conect can communicate via a standard RS-232 interface and a variety of acoustic or direct-coupled modems at either 300 or 1200 baud. The software is priced at \$150.

For more information, contact: Vector Graphic, Inc., 500 N. Ventu Park Rd., Thousand Oaks, CA 91320, (805)-499-5831.

## New Data Reporter for IBM PC

Synergistic Software has released The Data Reporter for the IBM PC, a new database management software package.

It is written in machine language and Basic, and has many features including search and sort routines to manipulate files, file merge, a reformatter, global editing, menu driven commands, a label making utility, and data calculation abilities.

The Data Reporter package includes sample setups with data to help users learn its features, as well as optional password protection, batch file processing of recurring tasks, a fully copyable disk, and seven different types of search routines.

Two more accessory packages will be available early this year. The Report Writer has basic word processing capabilities which help users create form letters, financial reports, and documents. A statistical and plotting package allows users to graph data in the database.

The IBM Data Reporter costs \$250, while the Report Writer and statistical package will be \$100 each.

The IBM Data Reporter requires an IBM PC with 64K and MS DOS. For more information, contact: Synergistic Software, 830 N. Riverside Dr., # 201, Renton, WA 98055, (206)-226-3216.

## OSM Introduces ZEuS4

OSM Computer Corporation, the manufacturer of ZEuS multiuser, multiprocessor microcomputers, has introduced the ZEuS4, its next generation tiny-footprint multiuser, multiprocessor microcomputer.

The Z80-based ZEuS4 utilizes OSM's multiuser System Executive (MUSE) operating system to support up to four users simultaneously in a totally segregated operating environment fully compatible with CP/M.

The ZEuS4 holds four user-replaceable modules: Winchester disk (up to 19 MB), switching power supply, floppy disk (5-1/4 inch standard; external 8-inch option available), and system/user board module.

The system/user board module contains the two-board master

processor and a separate user card with 10 square inches of circuitry for each user. The user board is factory-configured for up to four physically segregated CPUs, each with 64K RAM, and two serial ports, providing a separate computer for each user. A fully configured system has a total of ten serial ports and two parallel ports.

The basic single-user ZEuS4, with a Z80A microprocessor, 64K RAM, 6.3MB of 5-1/4 inch Winchester disk storage, and 250KB 5-1/4 inch floppy disk drive, lists for \$4595. Two user and four user configurations are available at \$1000 per increment.

For more information, contact: OSM Computer Corp., 2364 Walsh Ave., Santa Clara, CA 95051, (408)-496-6910.

Conference Session

## Software Requirements

"Just as a well planned dinner begins with the grocery list, followed by the trip to the supermarket, so should a software package begin with a requirements list prior to development or purchase," says Russell Cook. In his 8th Faire talk, "Role of Software Requirements," Cook will show how software requirements can help software consumers and designers.

Cook's software requirements can be divided into two categories: function dependent requirements (including function, input/output) and non-function dependent requirements (including language, program size, modularity, and others). His discussion will expand on these two categories and examples will be given to support his ideas.

## Exporting Software

There are many international business opportunities for selling or licensing computer software, both to end-users and for further distribution. However, U.S. companies will need to consider the U.S. export regulations. Usually two export licenses are required, one for the software and the other for the media.

In a conference session to be held at the 8th West Coast Computer Faire "Business Planning for Exporting Computer Software Under the U.S. Export Regulations" will be explored. Fred Greguras and Jacqueline Daunt, attorneys with Fenwick, Stone, Davis & West in Palo Alto, California, will review current federal regulations and their application to the computer industry.

"Top management must give export compliance responsibilities their close attention because the penalties imposed for non-compliance can be severe," warn the authors.

## Distribute Free Gazettes to Friends and Associates

The Computer Faire would be pleased to ship you any reasonable quantity of *Gazettes* you wish to request, for distribution to your friends, professional associates, and fellow employees. These are available without cost; the Faire will pay all charges, including UPS shipping fees.

Just write or call and tell us (1) how many you wish to receive, and (2) where to ship 'em (it must be a street address: UPS is prohibited from delivering to a P.O. Box).

Typically, a *Gazette* will include a variety of information of general interest, as well as - of course - all the details of the forthcoming West Coast Computer Faire, 345 Swett Road, Woodside CA 94062, (415) 851-7077.

## Sorcim Enhances SuperCalc

Sorcim Corporation has released an enhanced version of its CP/M- and MS-DOS-based spreadsheet program, SuperCalc. The enhanced program, called SuperCalc 2, takes advantage of the memory size, processing speed, and color display capabilities found in new 16-bit microcomputer systems.

SuperCalc 2 contains a calendar clock to automate date calculations and time periods, along with conditional summation of modular arithmetic for increased expression of flexibility. A memory extender function allows larger spreadsheets.

Additional features include an execute command allowing repetitive commands to be entered only once to facilitate worksheet linking.

SuperCalc 2 is compatible with Z-80, 8080, 8085, 8086, and 8088 CPUs, and runs under the CP/M 2.2, CP/M-86, MP/M-86, MS-DOS, and IBM PC-DOS operating systems. Minimum system main memory required is 48K bytes for Z-80/8080-based systems or 64K bytes for 8086/8088-based systems.

Users of 16-bit systems having

256K bytes of memory can fill all 16,002 cells of the SuperCalc 2 worksheet—enough space for a ten year projection by month. Also, users with color capabilities will see negative values and diagnostic messages displayed in red, with protected formulas shown in yellow.

SuperCalc 2 features other capabilities including: consolidation, sort facility, rounding function, additional formatting options, and additional print options.

Using the new data exchange standard, SuperCalc 2 can share information between Sorcim SuperWare products, and other CP/M-based applications programs, and vice-versa. A user may transfer financial information from SuperCalc 2 to a letter via SuperWriter, and onto the SuperData-File Manager database, and even add graphics using the SuperChart program, or perform the same task using another CP/M-based program.

SuperCalc 2 costs \$345. For more information, contact: Sorcim Corp., 2310 Lundy Ave., San Jose, CA 95131, (408)-942-1727.

## Do You Care or Don't You\*

If you do - then consider:

8088 - 128kb - 2 RS232 ports - 2 parallel ports - high resolution bit-mapped display (800x400) - CODEC - 2 high density 5-1/4" floppies (single-sided 600kb each or double-sided 1.2mb each) - tilt and swivel display - detachable keyboard map - soft loaded display character set - soft loaded keyboard map - expandable to 896kb memory - optional 10mb hard disk - 4 expansion slots ...

If you don't - you should consider:

CP/M - MSDOS - UNIX - Basic - COBOL - Fortran - Pascal - C - Forth - SuperCalc - Multi Plan - general ledger - payroll - accounts receivable and payable - inventory - DBASEII - business graphics - CAD - typesetting - communications - point of sale - loan applications - office automation - forms design - data input ...

# VICTOR 9000

In its review of the Victor 9000, BYTE magazine said, "... the machine is an excellent microcomputer with an outstanding array of standard features"

The leading German computer magazine called it, "The Computer of the year"

The Professional Machine priced like a personal ...

Unidot is your franchised Victor 9000 dealer in Santa Clara County with full sales, support, and service. At Booth 1119 at Computer Faire Unidot will be showing software for the Victor 9000 that has never been seen on a microcomputer before - come by and take a look.

But don't wait for your Victor 9000 ... Call today - 408-745-0505.

## Developments in Raster Graphics

Photographic detail, cinematic animation, and an unlimited range of colors are some of the major benefits offered by the raster-scan technique of computer graphics. Maria Runyon, an application engineer, will explain the technology of "Raster Graphics" at the 8th West Coast Computer Faire.

The availability of versatile, low-cost microprocessors has produced a surge of development interest in raster graphics, previously available only to a few specialized applications such as medical instrumentation and flight simulation.

"We have already seen advances in picture quality previously available only with vector-type displays, in-the-terminal-intelligence from inexpensive semiconductor memory, and anti-aliasing techniques for smoothing the stair-stepping image," says Runyon. "All of these advances have allowed us to become further involved in raster technology, with its advantages of color, flicker-free display of even the most complex im-

ages, and the capability to generate interactive and moving displays."

Raster's presentation will also be published in the *Proceedings of the West Coast Computer Faire*, available at the show in March.

## Power Pack With Concurrent CP/M-86

Digital Research, Inc. and Percom Data Corporation have made a joint business arrangement to distribute a Winchester hard disk and concurrent operating system for the IBM Personal Computer.

The two companies have agreed to produce PC Power Pack, a package consisting of a Percom Data Winchester 5-1/4 inch hard disk drive, a 256K RAM board and controller, and Digital Research's Concurrent CP/M-86, a single user, multitasking operating system.

For more information, contact: Digital Research, P.O.Box 579, 160 Central Ave., Pacific Grove, CA 93950, (408)-649-3896.

## Toshiba Joins Drexler's Memory Card Program

Toshiba Corporation, one of the largest electronics manufacturers in Japan, has become the first participant and licensee in Drexler Technology's Laser Memory Card Equipment Program.

This recently launched program will lead to the development of prototype write/read equipment for Drexon Laser Memory Cards and Optical Software Cards. The program is designed to accelerate commercialization of this new technology by offering companies the opportunity to take nonexclusive licenses for equipment manufacturing and to establish industry standards for cards and equipment.

Drexler Technology, the developer of the Drexon cards, plans to be the principal supplier of cards and is establishing manufacturing facilities for this purpose.

The Laser Memory Card can store 16 million bits (2 megabytes) of data, the equivalent of 800 pages of text, and can be used for writing and reading data for a variety of applications. The Optical Software Card, capable of storing more than 20 software programs typical of those currently used in personal computers and video games, is for loading software into microprocessors, microcomputers, and minicomputers. These types of wallet-sized cards could be used with personal computers, video games, office systems, manufacturing data systems, data distribution systems, medical data systems, banking terminals, identification, access control, and other digital information systems.

For more information, contact: Drexler Technology Corp., 2557 Charleston Rd., Mountain View, CA 94043 (415)-969-7277.

Gossip . . .  
(continued from page 10)

ing available. And, under G&G's MP/M-8/16 operating system on the CompuPro box, you can virtually ignore the fact that you are running software designed for two different CPU's. The OS sorts out whether you have called an 8-bit version of a word processor that is to be run on the 8085, or a 16-bit spreadsheet like SuperCalc (which is super), to be run on the 8088 directly addressing the entire memory space.

### COMPUPRO HARDFACTS

These Godbout Godzillas are unimpressive from the outside of their desktop mountings - just your ho-hum black box with power switch and reset button. But, their innards are exquisite. They're sorta like a Caterpillar tractor - beautiful only

to the Cat connoisseur who worships quality and reliability.

The power supply is so potent that it can even overcome the frail power offered that we have, out here in the redwood boondocks of the San Francisco peninsula. (Two neighbors turn on their electric ovens and the power drops to 114v.) Even with the box loaded full of power-hungry boards, the system doesn't whimper.

The PC boards are a particular delight. The traces are well-designed and solid; the soldering is neat and clean; the sockets are clearly labeled. Why, they even have card-pullers on 'em (such a joy, after tugging at the antique boards in our antique old computer). O' course, you don't need to pull the boards for repair; just for system modification.

We should also mention the holy mnemonic, "CSC." Godbout offers you the option of getting regular boards, or CSC boards - Certified System Components. Godbout will tell you that such CSC boards are burned in for a week or more - which is true. What he doesn't mention is that they also use faster chips. Thus, if you spend the nominal extra loot to get CSC boards, not only do you lessen an encounter with "infant mortality," you also get a faster system.

Furthermore, if you get the system through G&G, they cook it for another week or two - giving you a hi-temp 200+ hours of burn-in.

All in all, we find the CompuPro hardware plus MP/M-8/16 operating system to be most impressive. So  
(continued on page 22)

## Company on Go Supports Faire

The Sabaki Go Company of Carlisle, Pennsylvania recently sent us a letter full of good wishes for the 8th West Coast Computer Faire. The promoters of the oriental board game wrote that they "want to express support for this important event. Its success gives momentum to innovation and entrepreneurial opportunity."

# Data Broadcasting Introduced by TCP Business Systems

A Toronto company has combined broadcasting and computer technologies to open up a new field of computer communications. TCP Business Systems debuted this new technique, called data broadcasting, at the Canadian Computer Show held in Toronto last November.

With data broadcasting, data can be broadcast from one computer to any number of others using a standard television signal. The key to data broadcasting is Alpha Micro's

Video Link, a controller board that converts data into a standard TV video signal.

Alpha Micro is a California manufacturer of multi-user mini and micro business computers. These systems retail in Canada for between \$12,000 and \$65,000 (\$9,000 to \$50,000 U.S.). Over a year ago, Alpha Micro introduced the Video Link to users through its 200 dealers in 32 countries. The Video Link allows users to connect video cassette re-

orders (VCR's) to their Alpha Micro computers. With a capacity of over 100 megabytes per video tape, the VCR's provide a low cost, back-up system for Winchester disks.

But it was Toronto-based TCP Business Systems, that extended the application of the Video Link to include data communications. TCP, also known as The Computer Place, is a division of Azcar Technologies Inc.

TCP determined that the video

signal created by Alpha Micro's Video Link is identical to the signal television broadcasters use and that with the Video Link it was possible to transmit data in the form of a video signal from one computer to numerous points. Existing broadcast facilities, including cable, microwave, and satellite can be used to broadcast data.

During the Canadian Computer Show, TCP presented a special demonstration of data broadcasting to introduce the concept to computer professionals.

TCP booked time with Telesat Canada on one of the occasional use video channels on the Anik B satellite. An Alpha Micro AM-1000 computer was installed and waiting for instructions in Telesat's facilities at Allen Park, just south of Owen Sound. It received its command at 1:40 p.m. on November 17, when TCP President Murray Desnoyer gave the go ahead from a remote terminal in TCP's booth.

Immediately, the AM-1000 in Allen Park sent a dozen files containing text and data up to the Anik B satellite. TCP could have broadcast any type of information at all, including software programs, graphics, or daily stock quotations. From the "bird," 38,000 kilometers out in space, the transmission was broadcast back to earth. TCP received the signal at a three meter dish in the parking lot outside the Canadian Computer Show. Standard television cable brought the text and data to the booth where it completed its journey at a second AM-1000 computer.

Satellite transmissions can be received equally well anywhere within the satellite's receive pattern, or footprint. Anik B's footprint covers all of Canada, and a bit of the northern U.S. TCP's transmission could have been received clearly in Resolute, Frobisher Bay, St. Johns, New York, Minneapolis, Vancouver, and Dawson, as well as any point between those sites.

Most conventional methods of data transmission can be received at only one point at one time. The rate at which the information may be sent and received is faster by video (whether satellite or cable) than by existing methods. Additionally, high speed transmissions are available only between major centers, and tend to be expensive (several thousand dollars per month per center).

Satellite signals can be received in both metropolitan and remote areas. For about \$15,000 in the U.S. the business user can purchase a 10 Megabyte multi-user Alpha Micro computer system, with Video Link, plus all of the equipment required to receive a satellite signal. There are no additional line charges.

For more information, contact: TCP Business Systems, 233 Carlaw Ave., Toronto, Ontario. M4M 3E9, (416)-465-2493.

## Protect Your Trade Secrets!

Osborne/McGraw-Hill has just published a book on a timely subject, "Trade Secrets," by Attorney James Pooley.

Rapid technological change and employee mobility have contributed to increasing litigation based on theft of trade secrets and customer information. Millions of dollars are spent every year on unfair competition lawsuits involving customer list disputes and employee piracy. Exactly what is "intellectual property" and how can it be guarded?

In "Trade Secrets" Pooley emphasizes preventative techniques. Employers can learn how to protect their intellectual assets using patent, copyright and trade secret methods, as well as how to tighten com-

pany security systems and improve employee relations. Employees can learn how to develop their commercial ideas and, for the more enterprising, how to begin a competing business without being sued.

Should litigation arise, Pooley describes the components of a typical lawsuit, how it begins and proceeds from trial to settlement. He cites various cases and points out tactics and risks for both plaintiff and defendant. Appendices allow the reader to become acquainted with relevant legal forms.

The 145-page paperback costs \$11.95. For more information, contact: Osborne/McGraw-Hill, 630 Bancroft Way, Berkeley, CA 94710, (415)-548-2805.

## Computer Professions Hot for 1980's

Computer mechanics, systems analysts, and programmers will be the most sought after professionals in the 1980's, according to the U.S. Bureau of Labor Statistics. Also featured on the Bureau's list of fast-track occupations for the decade are paralegal personnel, aero-astronautic engineers, employment interviewers, tax preparers, and fast food restaurant workers.

Workers not in demand will include farmers and farmworkers, railroad car repairers, timber and logging workers, private household workers, teachers, taxi drivers, textile weavers, and shoemaking machine operators, according to the Bureau.

Conference Session

## Believable Video Animation

The computer display of a figure walking will be demonstrated using Activision and UAL video games during Tom Pittman's 8th Faire talk, entitled "Keeping Your Feet on the Ground: Believable Video Animation."

Animated video games usually spend a lot of their precious compute time and code space moving objects around the screen. The computer display of a person walking may involve changing anywhere from 50 to 100 pixels (picture elements) just for one step of one person. Pittman will discuss how linking the motion of the

object to sequencing of shapes can make for more effective graphics.

"Believable animation in object-oriented graphics can be achieved by careful synchronization of the leg and object motion," says Pittman. "Look at the two games demonstrated when this talk is given at the Faire. Which one looks better? Look at the video arcades and some of the games for your Apple, Atari, IBM, and others. When you write a video game, your graphics will look 100% better than these commercial products, just for a small amount of attention to this little detail."

## Simulation Software for Micros

A powerful simulation program developed on minicomputers is now available from Applied i for the Apple II, CP/M computers, IBM PC, and PDP-11. Tutsim, (Twente University of Technology Simulator), is an engineering design tool and teaching aid which models complex continuous systems such as electronic circuits, chemical reactions, and the human heartbeat, and displays the results numerically or graphically.

A larger minicomputer version of Tutsim is in use at a European chemical company to model a complete chemical plant. Operator training, process development, and plant troubleshooting are all carried out in Tutsim.

The microcomputer version of Tutsim is helping in the design of floppy disk drives, motorcycles, and particle accelerator power supplies.

It is also suited for demonstrating the principles of mechanics, electronics, chemistry, thermodynamics, and other scientific and engineering topics at either the high-school or college level. Simulation answers many questions about new designs more quickly, at lower cost and sometimes more safely than building and testing prototypes. In teaching, it makes visible the meaning of abstract principles and lets students work with models of systems that are too complex for hand calculation.

Models are built up from more than 50 predefined function blocks and bond graph elements, plus user defined functions. Creating and running models are fully interactive. The user can modify parameters and choose which variables to plot on the X and Y axes during a run. Some of the available functions are

analog resistors and capacitors, digital flipflops, time delays, amplifiers, integrators, and noise generators. The Apple II and CP/M versions can handle up to 999 blocks in a single model, and the IBM PC will have greater capacity. Blocks average five or six bytes each, depending on the number of parameters to be set.

Tutsim supports the CCS arithmetic processor board for the Apple and the Intel 8087 Arithmetic Coprocessor for the IBM PC. Graphics hardcopy is also supported.

Apple Tutsim costs \$375. CP/M Tutsim is \$400. PC Tutsim pricing will be announced. The PDP-11 versions, nominally \$3000 and up, are available to qualified educational institutions at minimal cost.

For more information, contact: Applied i, 200 California Ave., #205, Palo Alto, CA 94306, (415)-325-4800.

### Faire Smoking

By city ordinance, smoking is permitted only in the entrance lobby of the Civic Auditorium. It is explicitly prohibited in the conference halls, perhaps due to limited ventilation.

# Avoid Long Lines, Pre-register for the Faire!

Although the Computer Faire, itself, is not staffed to handle preregistration, it has arranged for a number of sources for preregistration.

The stores prefer that you drop by to pick up your prereg - they'd like to see you and have you see what they have to offer. ("Know your dealer.") However, should you be unable to do so, several of them - marked below by an asterisk - are accepting mail orders, IF you do the following:

1. Phone the store for their reg fee. By FTC regulations, the Faire cannot tell them what to charge. Send full payment, and a stamped, self-addressed, legal-size envelope.

2. Send your mail order in time to reach the store by March 1st. (Remember, the U.S. Mail Service will be handling its delivery in both directions.)

Sunnyvale to San Francisco

## Bus Transportation to the Faire

For the fourth year in a row, the Computer Plus Bus will carry people from Sunnyvale to the Computer Faire and back. This service is offered by Computer Plus at the corner of Mary and Fremont, at De Anza Square Shopping Center in Sunnyvale, CA.

On Friday, March 18, the bus will leave Computer Plus at 8:00 a.m., and begin its journey back from the Computer Faire at 3:30 p.m. On Saturday, March 19, the bus will leave Sunnyvale at 8:30 a.m., and leave the Faire at 3:30 p.m.

Reservations with full payment must be made by Friday, March 11. For more information call: Computer Plus (408) 735-1199, 10 a.m. - 6 p.m., Monday and Saturday, 10 a.m. - 7 p.m., Tuesday through Friday.

## Play Your Hand With CompuBridge

CompuBridge, a division of Barclay Bridge Supplies, has introduced a new series of computer bridge programs, designed for the Apple II.

The programs are available in two versions, elementary and complete. Both start from the very basics, including vocabulary, mechanics of the game, and simple point count, and then progress to opening bids, responses, rebids, opening leads, and declarer play. The complete course introduces common conventions and goes into greater detail on responses, forcing bids, doubles, and overcalls. Random hands test the user's progress throughout the lessons.

The Elementary program is available on a 32K cassette for \$19.95; the complete program is on a 32K cassette for \$29.95 or a 48K diskette for \$39.95. All programs are in Basic. An adapter card is needed for machines which only use AppleSoft.

CompuBridge's Dusco program, for use by duplicate bridge clubs, is programmed in AppleSoft and costs \$39.95.

For more information, contact: CompuBridge, 8 Bush Ave., Port Chester, NY 10573, (914)-937-4200.

Conference Session

## Campy Computers

"Computer camps for children are an outgrowth of the mushrooming computer literacy movement in the United States today," says Thomas Copley, executive director of Yellow Springs Computer Camp, Yellow Springs, Ohio. In his 8th Faire talk, Copley will discuss the joys and frustrations of starting an independent, non-profit day camp that offers riding, swimming, unicycle riding, and other activities, as well as computing.

## Save 26% on Faire Registration

By gathering your friends and associates together, you can all save \$4 on 8th Faire registration fees — paying \$11 each, instead of the \$15 “at the door” fee. (Or, you can “deal” registrations and earn a few extra dollars for yourself or your group.) Here’s how:

Purchase Faire registrations in blocks of ten or more, no later than March 7, advancing \$110 for a minimum order of ten (prepaid). (There is a small shipping and collection charge on COD orders.)

You can return up to half the number of registrations

ordered, by March 17 (the day before the Faire), for a refund of \$11 per returned/unused registration.

To take advantage of this offer send your check or COD order for ten or more registrations (advancing \$110 @ on prepaid orders) to:

Pre-registration Desk  
Computer Faire  
345 Swett Road  
Woodside CA 94062

Include your street address for certified UPS delivery. We pay shipping on prepaid orders. You pay shipping and collection charges on COD's.

## Lifetime Warranty on Flexible Diskettes

BASF Systems Corporation has introduced a first in the history of computer media — a complete line of flexible diskettes certified 100 percent error free and carrying a lifetime warranty.

The FlexyDisk line is the first in BASF's family of computer media products to earn the company's Qualimetric seal representing a new international standard of quality.

These second-generation, world-class floppies are also being introduced with new packaging which, along with the Qualimetric seal, differentiates the new BASF products from the old.

Included in each FlexyDisk box is a newly designed brochure which explains the standards each BASF FlexyDisk must meet to earn the Qualimetric seal.

BASF has improved its disk coating and processing techniques, developed an ultra-clean manufacturing environment, and made three design changes in the diskette jacket alone — all of which are engineered to guarantee the user a BASF FlexyDisk with a long and reliable life.

Quality tests are made at each step in the production process which

ensure that each FlexyDisk shipped from BASF is manufactured to the highest performance standards in the world. Only when a BASF FlexyDisk meets 100 percent error-free requirements is the product made available for shipment to the customer.

For more information, contact: BASF Systems Corp., Crosby Dr., Bedford, MA 01730 (617)-271-4000.

### Conference Session

## System Impacts of 32 Bit Micros

Thomas Johnson, a Motorola systems engineer will paint a bleak picture of the possibility of fully utilizing new 32-bit processors in his 8th Faire talk “System Impacts of 32-Bit Microprocessors.” He will discuss areas of hardware and software design that should be examined before embarking on a 32-bit design.

“It is imperative that prior to starting a 32-bit design, the overall system be closely examined for possible performance flaws, and the question be asked: ‘Does this design REALLY require a 32-bit processor?’” says Johnson. “It is better that more performance be pulled from one of the existing 16-bit machines than idling one of the 32-bit monsters, just so the marketer can say he has a 32-bit system.”

## Privacy and Security

The Privacy and Security Committee of the Computer and Business Equipment Manufacturers Association (CBEMA) has updated its publication, “CBEMA Privacy & Security Bibliography.”

The bibliography contains 750 entries on books, reports, and journal articles published in English on computer security, information privacy, and privacy and security aspects of transborder data flows.

For further information on how to obtain a copy of the “CBEMA Privacy & Security Bibliography,” contact: Privacy and Security Committee, CBEMA, 311 First St. N.W., Washington, DC 20001, (202)-737-8888.

## Intelligent Robot For Home Experimenters

The RB5X Intelligent Robot, a manufactured unit designed for home experimenters, is now available.

Manufactured by RB Robot Corporation of Golden, Colorado, the RB5X learns from its experience. With its own microprocessor, memory, programs, and tactile sensors, the robot detects and responds to objects in its path. Once a successful random response is achieved, the RB5X remembers its actions and repeats the correct response when confronted again with the same situation. These same principles are intended to be applied with other sensors and with more complex programs by the home experimenter using the RB5X as a starter system.

Designed for technically-oriented consumers (engineers, scientists, computer programmers, educators, hobbyists, etc.), RB5X features allow experimentation in robotics. Users may increase the “experience” and capability of the robot by installing additional mechanical functions and additional sensors, such as Polaroid's Rangefinder sonar sensor.

The robot's standard RS-232 interface makes it compatible with the Apple, TRS-80, IBM PC, and other popular microcomputers to allow for program entry and data transfer. For example, its memory can be transferred to a personal computer to enable the user to study memory patterns generated and alter RB programs accordingly.

One circuit in the RB5X enables it to recharge its batteries automatically. The robot senses when its batteries are low, seeks out its battery

charger, fully charges over a period of time, and detaches itself from the charger to resume its adventures.

The basic RB5X unit sells for \$1195. A special option package with additional memory, the Polaroid Rangefinder sonar sensor, and a pulsating light option is also available for \$295.

New features under development include a mechanical arm, a voice synthesizer, and digital radio communications between RB5Xs.

For more information, contact: RB Robot Corp., 14618 W. Sixth Ave., #201, Golden, CO 80401, (303)-279-5525.

### Conference Session

## Computer Vision and Image Recognition

Computer vision and image recognition has always been a problem in robotics and machine intelligences research. But Henry Pfister says it is now possible to assemble a computer imaging system with high computational capability for under \$4000.

In his 8th Faire talk, “Computer Vision and Image Recognition,” the University of Southern California, Los Angeles, faculty member will discuss the system. It is comprised of an Apple II, a DS-65 video camera digitizer, and an Acorn 68000 processor.

## Statistics the Easy Way

The computer does most of the work in the statistics package developed by Luc Hondeghem, M.D., PhD, Professor of Pharmacology at University of California, San Francisco. He'll describe the package's unique features during his talk, “MDCSTAT: Statistics the Easy Way,” at the 8th West Coast Computer Faire.

Hondeghem linked together a collection of statistical programs to run under CP/M in Microsoft's Basic, then added an extensive data manipulator program, capable of performing a variety of statistical functions.

The G-key plots Y versus X and produces an annotated graph for review. The U-command will evaluate two related variables, by reviewing 100 functions and choosing the one to best describe their relation (e.g., linear-linear, log-linear, cos-cube, log linear and 97 more). When necessary, an X-command automatically displays the appropriate section of the manual on the screen.

“Statistics is the art to figure and refigure the figures till they figure significantly,” comments Hondeghem.

## SGG Want Ads

**FOR SALE:** Computerized Typesetters. Various brands at very low prices. Use your WP or CPU for a front end — or purchase complete unit. (415) 851-4167, Monday through Friday only, please.

**WANTED:** To purchase almost anything electric or electronic — or — any items new or used that can be re-sold. Please call Max Clark, Mon-Fri (415) 851-4167.

**FOR SALE:** Computerized Typesetting. Incredible prices for large-needs account. Same for same back-up unit. Catalogues, lists, etc. Max Clark, (415) 851-4167, Monday through Friday only, please.

## Free Future Copies of the Silicon Gulch Gazette

Just send your name and mailing address to Computer Faire, 345 Swett Road, Woodside CA 94062

## New Information Database

Users of personal computers at home or office can tap into a new information retrieval service covering topics from aerodynamics to zero-base budgeting as well as reviews of books, movies and vacation resorts.

The new service is Knowledge Index, offered by Dialog Information Services, Inc.

Subscribers will be able to scan more than four million entries from over 10,000 journals and other publications, many updated daily. Information covers computers, electronics, engineering, law, medicine, agriculture, business, psychology, and education. A wide range of information from newspapers, magazines and government publications is also included.

The cost of Knowledge Index is \$24 per hour.

The one-time initiation fee of \$35 includes two free hours of access plus an instructional manual.

For more information, contact: Knowledge Index, Dialog Information Services, Inc., 3460 Hillview Ave., Palo Alto, CA 94304, (800)-528-6050.

## New Payroll, Ledger Software

TCS Software's Client Ledger System now runs on the IBM Personal Computer without the use of a CP/M card. The TCS Client Ledger System is a general ledger designed for public accounting firms, and for those who provide accounting services to small businesses.

It features a fully integrated passive payroll subsystem, user-defined profit and loss statement formats, ledger consolidation, work-in-progress sub-ledger, and over 50 reports. In addition, CLS provides three user-defined reports.

The newest revision of CLS features the accelerated cost recovery (ACRS) depreciation schedule, a floating decimal point, an edit mode in the "Enter transaction" option, and printer capability to select either compressed or standard print mode based on the report size.

For more information, contact: TCS Software, 3209 Fondren Rd., Houston TX 77063, (713)-977-7505.

Conference Session

## Enjoy your Lisp

Although many computists have lauded Lisp as one of the best computer languages available in recent months, it is still unknown to many.

In his 8th Faire talk, "Lisp, A Short Introduction," Richard Munoz will present Lisp as a "universal programming tool with many advantages when compared to traditional languages." Munoz, project manager of Friends of Lisp/Logo & Kids will discuss the language's origins, applications, and advantages.

## New DTC Daisy Wheel Printer for Micros

Data Terminals and Communications has introduced a new daisy wheel printer, the DTC 380Z for the personal computer user.

The specification includes a 48,000 character buffer memory for high speed throughput. This allows the computer to fully load up the printer memory within a few seconds, then be used for further applications while the 380Z prints 24 or more pages. Print speed is always dependent on the nature and layout of the text and the 380Z prints at up to 32 characters per second. Interconnecting cables are available to enable the DTC 380Z to work with all major personal computers including Osborne, IBM, Apple, and TRS-80.

Other features are full bi-directional printing, automatic proportional spacing, serial and

parallel interfaces, software compatible with the Diablo 1640/1-650/630, graphic plotting, 50 to 19.2K baud, and a momentary pause capability for paper, printwheel and ribbon changing. The printwheel is available in 12 different print styles and works with standard ribbons. A self-diagnostic test will completely test the unit and the four internal CPU's, while the printer is completely isolated from the computer. Error conditions are indicated by status lights.

Optional extras include forms tractor, and a variety of type fonts and interconnecting cables. The printer costs \$1199.

For more information, contact: Data Terminals and Communications, 590 Division St., Campbell, CA 95008, (408)-378-1112.

IBM Personal Computer Product

## Electronic File Cabinet

Information Unlimited Software has released a new software package for the IBM Personal Computer, designed to work as an "electronic file cabinet" for the user.

Called EasyFiler, the program offers a method of storing and retrieving data on the IBM PC. User definable and modifiable, EasyFiler allows the user to design a customized form for storing customer lists, telephone numbers, sales records, and other pertinent data. Unlike some other database programs currently on the market, which employ predefined forms, the IUS package is unique to each user's application.

EasyFiler features built-in report capability combined with a built-in full screen text editor. It gives the user the ability to key on up to six different fields and interfaces with IUS's word processor, EasyWriter II. EasyFiler interfaces with the full line of IUS software.

EasyFiler retails for \$400. For more information, contact: Information Unlimited Software, Inc., 2401 Marinship Way, Sausalito, CA 94965, (415)-331-6700.

Gossip . . .

(continued from page 18)

much so that we paid significant loot to get a pair of 'em.

Note: CompuPro gear is definitely not for the bottom-of-the-line economy shopper. If you want to spend little money, but probably spend lots of time on malfunctioning gear, get something else. If you want something that - for sure - is likely to run and run and run, and let you spend your time on something other than repairs . . . we recommend the CompuPro line. Remember, "cheap" is not the same as "inexpensive."

### SORCIM'S SUPERCALC IS

Of course, a reliable computer is nice, and a robust operating system is a pleasure, but applications-oriented software is what makes a computer more than an ornament.

More than any other single factor - computerized financial spreadsheets are probably what truly popularized personal computers . . . at least in the business community. We have tried several of these spreadsheets and are particularly impressed with SuperCalc from Sorcim (especially if it is running on an 8086 or 8088 system with its massive memory space).

Sorcim has given considerable attention to assuring that SuperCalc is very congenial in its interactions

Conference Session

## Word Processing, Questions to Ask

A thoughtful guide to purchasing a word processor will be presented at the 8th West Coast Computer Faire by Larry Press, of the Small Systems Group in Santa Monica, California.

"Word Processing, Some Questions to Ask" will review the nuts and bolts questions regarding hardware and software.

Press says, "The first question to ask in choosing a word processor is How will I be using it? Will I prepare many short documents or relatively few long ones, is final appearance critical, will I be doing mass mailing, will I be assembling documents from pre-written boilerplate? ...Your planned use will determine your requirements."

After thinking through the ways in which you will use your system and visiting several potential dealers for hands-on demonstrations, Press recommends reviewing hardware considerations such as the type of keyboard and display you will need, the sort of printer, the amount of memory and disk storage, and the CPU and operating system which would best fit the bill.

Software should be chosen carefully, says Press. Important considerations discussed will include: the speed and convenience of basic editing, the complexity of advanced editing functions, quality of document assembly, command structure, disk access, editing and printing transitions, and text formatting.

Press will also talk about a system's compatibility with other software, the quality of the documentation, the file system and directory structure, and how long it takes to learn to use a word processing system.

with naive users. It minimizes the demand for users to be computer-knowledgeable, and it minimizes the necessity for users to remember contorted sequences and obscure codes.

Though we recognize that application software is changing and improving with phenomenal speed, we certainly recommend that anyone needing a "what if" spreadsheet system take a careful look at SuperCalc.

### AND PASCAL/M

While we are mentioning Sorcim software that we are using, we should mention their Pascal/M translator. It outputs p-code. Listings can easily be sent to the console, disk, or printer (unlike some Pascals that "know what's best" for the user). It offers a number of significant extensions to Pascal as Wirth originally defined it, however - unlike some so-called "Pascal" translators on micros, it will translate programs that are written in standard Pascal.

It includes a good debugger - PASDDT - that, among other things, allows you to single-step through your program.

There is one other thing about Sorcim: It's run by a long-time computer pro of ample ability, named Richard Frank. In an industry where a few vendors are becoming increasingly

(continued on page 26)

# Enhanced Word Processing

A new word processing package that runs with Unix and Unix "look-alike" operating systems was introduced today by Horizon Software Systems, Inc. The software is designed for use in instrumentation, automation, and data processing environments.

Horizon WordProcessing offers full-screen editing, complete format-

ting and document management. Documentation includes a primer, reference card, tutorial, experienced users' reference manual, and on-line "help" tutorials.

All functions needed to edit, format, expand, delete, merge, recall, display, and print a text are included in Horizon. More complex formatting is handled by imbedded standard formatting commands. Users can preview documents before they are printed. Imbedded commands provide extended capabilities including justification, automatic hyphenation, running headers and footers, footnotes, superscripts, subscripts, automatic page numbering, and typesetting.

Once the document has been entered and edited, Horizon provides a standard output format which the user may change to meet specific output requirements.

Horizon allows the user to define top, bottom, right and left margins, lines per inch, characters per inch, number of blank lines between paragraphs, page lengths, automatic headers and footers, and page numbering.

In addition, Horizon users may select right, left, centered or two-column page justification. Paragraphs may be numbered and have the first line indented or outdented. The user controls the way words, phrases, and hyphenated words are split at the right margin. "Hard spaces" and "hard hyphens" may be used to suppress a random break.

Horizon runs on any Unix-based operating system with a video display screen terminal and a system printer.

The software is available for \$750. For more information, contact: Horizon Software Systems, Inc., 220 Downey St., San Francisco, CA 94117, (415)-751-1311.

# Multicolor Printing Program

Multicolor printing, book style justified type, decorative effects and a range of other printing features can now be created with a new software product called Colortext. Developed and marketed by Jupiter Island Corporation, Colortext gives microcomputer users access to the capabilities of the IDS Prism Printer without programming.

Colortext enables text editor users to print in eight colors, six type sizes, and a variety of line spacing options. Other printing features include automatic centering, micro-spacing, proportional and fixed character spacing, subscript and superscript, reverse line spacing, a high speed draft mode, and characters for six foreign languages.

Colortext runs on CP/M, IBM PC-DOS or MS-DOS. The system must also be equipped with a text editor or word processing program, an IDS Prism Printer, and a Process color ribbon.

Colortext costs \$149. For more information, contact: Jupiter Island Corp., 1900 Powell St., #1135, Emeryville, CA 94608, (415)-655-0840.

# IBM PC Form Processing Database

Applied Software Technology has released an IBM PC version of the VersaForm Business Form Processor.

The IBM PC version shares a standard VersaForm user interface. Current VersaForm users can implement their form templates on an IBM PC without modification.

The IBM PC version, compiled under version IV.O of UCSD Pascal, implements several hardware features of the IBM system. Multi-mode reverse screen video for easier data entry; full "function key" support to speed command selections; the use of floppy disk drives of up to 400 Kbytes per diskette for increased data storage capacity; the utilization of main RAM memory as a logical disk drive (384 Kbytes of a maximum of 512 Kbytes permitted on the IBM PC) are standard PC version features.

Exchange of forms data is permitted between Apple II/III and IBM PC Systems, regardless of source machine, through a communications sub-system (e.g. modem, local area network, etc.) or a hard disk network (e.g. Corvus, Omninet, Santa Clara Systems SCS-series, etc.). System

requirements for the IBM PC version are 128 Kbytes of system memory (RAM) and two double sided floppy disk drives.

IBM PC VersaForm costs \$389. For more information, contact: Applied Software Technology, 14125 Capri Dr., Los Gatos, CA 95030, (408)-370-2662.

# Computer Science Encyclopedia

"The Encyclopedia of Computer Science and Engineering Second Edition," a one-volume reference, has just been published by Van Nostrand Reinhold. The book, with more than 550 entries and over 700 illustrations, tables, and charts covers nine broad subject areas: hardware, computer systems, information and data, software, mathematics of computing, theory of computation, computing methodologies, computer applications, and computing milieu.

The book costs \$87.50. For more information, contact: Van Nostrand Reinhold, 135 W. 50th St., New York, NY 10020, (212)-265-8700.

Conference Session

## Author, Author! Your Role in Computer Book Publishing

"My objective is to present a short history and a look into the future of microcomputer book publishing, as well as a strong argument - I hope - for your writing a computer book," says Raymond Collins of his 8th Faire talk "Your Role in Computer Book Publishing."

Collins, a vice president of Tab Books, Inc., will explore areas of interest to all novice computer book

authors. He will discuss choosing a topic, investigating the computer book market, querying a publisher, and authors' rights. Now is the time for authors to break into this burgeoning market, says Collins.

"The market for computer books is so strong that it resembles the market for books about a fad. We have all learned in book publishing, however, that microcomputers are not part of any fad," says Collins.

DISCOVER THE DIFFERENCE,  
START SAVING TIME AND MONEY

LOGICSIM™

CP/M based  
professional  
logic  
simulator

- \* For engineering work stations
- \* For gate-array, semi-custom and custom IC designers
- \* For board-level digital system engineers

LOGICSIM makes complicated design, test and verification easy. Replaces messy breadboards; fruitless hours on the bench. Lets you focus on your design; not hardware problems.

Nine logic states, ability to simulate TTL/NMOS/CMOS/PMOS logic, ROM's and RAM's, three-state and transfer gates, wired-or'ed nodes, propagation delays, spike and race and timing analysis, expandable pin-number based TTL macro library containing over 100 device models, plus numerous other features make it a powerful and usable design tool already in use by many large companies.

## Meeting Someone at the Faire??

*Suggestion:* Ask friends and associates to meet you in the balcony area of the Civic Auditorium. Specify the left, right, or center section. It has ample seating and overlooks the Civic Auditorium exhibition area.

*Note:* The public address system is NOT available for paging individuals, except for medical emergencies.

Conference Session

## Special-Purpose Languages

"The message I would like to present is that personal computers can be programmed by people who don't want to fuss with programming languages," says Sheldon Softky, who will speak on "Developing Special-Purpose Languages" at the 8th Faire. "All that is needed is that developers of application software provide their systems with 'user-oriented' input and control languages for each special use. These user-adapted languages we call Special Purpose Languages."

Softky will discuss how Special Purpose Languages can allow many non-software programmers to program their own work for simple applications. He will show how the same software development principles used for big computer systems can be helpful in developing small application programs.

The paper will be published in the *Proceedings of the 8th West Coast Computer Faire*, available at the March show.

## High Level Cobol Supports Kanji

The first portable microcomputer Cobol compiler to support the Japanese Industry Standard (JIS) set of Kanji characters has been introduced by Micro Focus.

The High Level compiler processes alphabetical, numeric, and Kanji symbols as it reads the source code. Level II Cobol also supports Katakana characters, the Japanese ideograms for Western words not represented by other existing Japanese symbols.

Programmers using Level II Cobol can reach Japan's office automation market with applications that present Kanji text on screen displays and printouts, and permit users to enter Kanji via the keyboard. Application users will see Kanji characters rather than less familiar alphabet symbols because programmers can now define paragraph names, data names, and literals in Kanji as they write source code.

The portability of Level II Cobol allows programmers to create applications for a broad range of microcomputers, and its compatibility with Cobol applications on large computers permits programmers to bring mainframe application software to desktop computer users. With Level II Cobol, microcomputers can also be used as software development and maintenance stations for mainframe computers running ANSI '74 standard Cobol applications.

Level II Cobol is certified at the High Level, the most sophisticated level of implementation, by the United States government. It is certified with zero errors by the U.S. Federal Compiler Testing Center.

For more information, contact: Micro Focus, Inc., 1860 Embarcadero Rd., #235, Palo Alto, CA 94303, (415)-856-4161.

## Getting from the Airport to San Francisco

Flying in for the Faire?

Once you step off your flight at the San Francisco Airport, watch for these shuttles to take you into the city.

The Airporter Bus will deliver you to its downtown San Francisco terminal in 30 minutes for \$4. After you arrive at the terminal, located at the corner of Ellis and Taylor, you'll need to take a cab to reach your hotel or the Civic Center.

The Airporter Bus leaves San Francisco International Airport every 15 minutes from the lower level TWA baggage claim area or carousel 5 of the United baggage claim area. For more information, call (415)-495-8404.

Limousine service to the Civic Center is offered by The Airport Connection. For \$42, five people can share a limo to the Civic Center. Call ahead for reservations, or be prepared to wait for up to an hour for a car. The Airport Connection's number is (415)-877-0901.

## REQUEST for HOTEL RESERVATIONS

SAN FRANCISCO CIVIC CENTER

MARCH 18-20, 1983

For your convenience, Computer Faire has arranged for San Francisco Convention and Visitors Bureau to handle accommodations at the following hotels. These rates are only valid on reservations received by February 17, 1983. Rates are subject to 9.75% Hotel Tax, used in part to pay for San Francisco convention facilities.

Please complete this form and mail to: West Coast Computer Faire Housing Bureau  
San Francisco Convention and Visitors Bureau  
Box 5612  
San Francisco CA 94101

Advance reservations under this plan must be made on this form. Telephone reservations cannot be accepted.

HOTEL	Single	Double Twins	Suites
<b>THE SAN FRANCISCAN (Headquarters)</b> 1231 Market Street (1 block from Civic Auditorium)	\$60-\$72	\$70-\$82	\$140-\$160
<b>HOLIDAY INN/CIVIC CENTER</b> 50 Eighth Street (1 1/2 blocks from Civic Auditorium)	\$68	\$78	
<b>SHERATON PALACE</b> 639 Market Street (8 blocks from Civic Auditorium)	\$100	\$110	
<b>AMERICANIA</b> 121 Seventh Street (2 1/2 blocks from Civic Center)	\$53-\$55	\$57-\$59	\$71-\$80
<b>CARRIAGE INN</b> 140 Seventh Street (2 1/2 blocks from Civic Center)	\$53-\$55	\$57-\$59	
<b>HOTEL BRITTON</b> 112 Seventh Street (2 1/2 blocks from Civic Center)	\$32	\$38	

Note: Reservations held to 6pm day of arrival.

PLEASE MAKE THE FOLLOWING HOTEL RESERVATIONS:

Hotel Choice: First \_\_\_\_\_ Second \_\_\_\_\_

DO NOT SEND A DEPOSIT WITH THIS FORM

No hotel reservations will be confirmed by the Computer Faire Housing Bureau until receipt of this form. sgg34

## Tort Liability and Computer Vendors

While a breach of contract action is still the most frequent legal move taken against a vendor who doesn't deliver what was promised, there is a growing trend toward tort claims, because they can avoid limitations and disclaimers found in a vendor's form contract, according to Attorney Michael Scott.

In his 8th Faire talk, "Tort Liability of Computer Vendors," Scott, publisher of the "Computer/Law Journal," "The Scott Report," and "Software Protection," will discuss the applicability of tort doctrines to computer disputes.

"Tortious conduct can come in many guises. However, it can be divided into two clearly defined categories - negligent conduct and intentional conduct," says Scott. He will discuss several tort theories in each category and how they can be applied to the sale or leasing of computer hardware and software.

### San Francisco Events Hotline

Looking for some night life while you're in San Francisco for the Faire? Call the San Francisco Convention And Visitors Bureau Hotline at (415) 391-2000. The taped message will tell you about dance, comedy, music, theater, opera, and sports events in the city.

## Third Edition of CP/M Index

The third edition of the Small Systems Group's "CP/M Software Index" has just been published. The Index lists 1688 professionally supported programs, offered by 507 vendors. A brief description, the vendor's name, address, and phone number, the price, and operating system versions are shown for each package. All indexed programs are available for the CP/M-80 operating system and many are also available under CP/M-86, MP/M-80, MP/M-86 and Concurrent CP/M-86.

The Index is organized into five major areas: systems programs, general applications, accounting applications, utility applications and industry specific software. These areas are broken down into 89 categories. Examples of the categories are data management (66 entries), integrated accounting packages (54 entries), higher level language processors (105 entries), medical packages (30 entries), and construction packages (32 entries). Less obvious categories, for instance, dairy and cattle programs (17 entries) and sports (10 entries) are also indexed.

In spite of the recession, the rapid growth of the software industry is shown by the fact that this edition of the Index contains more than twice as many programs and vendors as the second edition did.

Single copies of the Index are \$10, prepaid (\$14 outside of North America). For more information, contact: Small Systems Group, P.O. Box 5429, Santa Monica, CA 90405, (213)-392-1234.

## Cromemco Conversion Boards

Two new data conversion boards by Cromemco will facilitate the use of its S-100 bus compatible computers in real time data acquisition, monitoring and control applications. microsecond and for the ADC12, less than 25 microseconds.

The two new products are designated the DAC12, a two channel, 12 bit digital to analog I/O board, and the ADC12, a sixteen channel, 12 bit analog to digital I/O board. Conversion time for the DAC12 is five

No special software is required to convert the signals in either direction. Instead, a simple output instruction executed by the computer initiates the conversion process in both products.

For more information, contact: Cromemco, Inc., 280 Bernardo Ave., Mountain View, CA 94043, (415)-964-7400.

## Programmable Spreadsheet for IBM Computer

Information Unlimited Software, Inc. today introduced its newest piece of productivity software, a package offering a programmable spreadsheet capability to IBM Personal Computer users.

Called EasyPlanner, the program is aimed at middle management users in the general business audience. However, it is also a tool for professionals such as physicians and attorneys, whose financial analysis applications are often too complicated to be performed efficiently in a manual system.

Conference Session

## Modification on the 6502

"Instruction modification - the changing of the instruction codes of a program, by that program, and for a specific purpose - is a technique that was much used in the early days of computing," says W.D.Maurer, of the Department of Electrical Engineering and Computer Science at George Washington University in Washington D.C.

At the 8th West Coast Computer Faire, Maurer will describe "Instruction Modification Techniques on the 6502". The Apple II+, Apple III, Atari 400, Atari 800, PET, KIM, and many other microcomputers are 6502's.

Applications of this technique may include modification of addresses, of instruction codes, of immediate data, and of the 8-bit relative addresses in conditional branch instructions.

"These techniques can lead to savings in both time and space over their alternatives, and in a few cases can provide facilities not available otherwise," says Maurer. But he cautions, "Like any programming techniques, these must be used with care."

## Metacompiler - Ultimate Forth Tool

Metacompiling is an activity fairly common in Forth, but not generally applicable to other computer languages. John Cassady will present a non-technical introduction to the metacompiler as a programming aid during the 8th West Coast Computer Faire. His talk will be entitled "Metacompiler-The Ultimate Forth Tool".

### The Complete ANSI Standard MUMPS Computer Language

Now Available for all popular Microcomputers

Come see us at the Faire—Booth P23

Introductory MUMPS Presentation at Faire

- MUMPS Programming Instruction Manuals
- CP/M Based MUMPS Available
- Mark your calendar:
  - MUMPS Users' Group Annual Meeting
  - May 31-June 4, 1983

## Unix Benchmark Programs

Aim Technology is offering a portable Unix Benchmark tape to measure actual end-user throughput and multi-user performance. Nine distinct tests, consisting of shell scripts with "C" programs, run unattended on any Unix based system (Unix V7, Unix System III, Xenix, etc.) Each test prints comparative graphs, as well as raw measurements.

Aim Portable Unix Benchmarks test Version 7 Unix command list completeness, C Compiler efficiency, and several common aspects of hardware performance applicable to V7, as well as System III. CPU measurements include looping and floating point calculations. Benchmarks examine disk transfer speeds for various record lengths. Compiler optimization is examined for short integer, and long types.

Memory/paging throughput is measured, as well as interprocess communications speeds. Multi-user performance is examined for simulated multiple users doing sorting and editing.

The tests are provided on nine track, 1600 BPI Tar tape with documentation and sample benchmarks from VAX 750, VAX 780 and PDP 11/70 for comparison. The suite runs in approximately 45 minutes on an unloaded VAX 750 and produces about 15 pages of report output.

The price of the Aim Portable Unix Benchmark Programs is \$1250. For more information, contact: Aim Technology, 3333 Bowers Ave., #199, Santa Clara, CA 95051, (408)-727-3711.

Conference Session

### Lost Children & Lost Parents

At the Computer Faire

Although the Computer Faire is intended for mature individuals, if you take young children to the Computer Faire (which we do *not* encourage), please instruct them to go to the Computer Faire office if they get lost from you.

Older children, family, friends & business associates might be asked to meet you in the balcony (left, right or center; seating available overlooking the main arena).

The Faire will *not* use the public address system to page for lost children or adults.

### Life Sciences Database

Researchers in the life sciences field using microcomputers will soon have direct access to current research literature which relates to their special interests. A subscription service is being developed which will deliver diskettes containing new listings, drawn from a file of well over a million references.

Louise Schultz, systems development director of BioSciences Information Service of Philadelphia, Pennsylvania, will describe the search system during her 8th Faire talk "B-I-T-S: Life Sciences Literature Files on Floppy Disks." B-I-T-S stands for BIOSIS Information Transfer Service.

## Error Correcting Hard Disk Controller for S-100

Advanced Digital Corporation has added an error-correcting, microprocessor-based hard disk controller board to its line of S-100 based products.

Identified as the Model HDC-1001, the unit provides the S-100 based computer user with a compact, cost-effective controller capable of operating up to four 8-inch or four 5 1/4 inch hard disk drives.

The error correcting capability includes a 32-bit computer generated polynomial, which according to Advanced Digital Corporation President Hossein Asadi, will detect and correct errors before the user is even aware of them. Other features are: up to 8-bit single burst correction, multiple burst detection, and programmable

correction/detection span.

The Model HDC-1001 is completely S-100, IEEE 696 standard compatible and provides control for up to four drives and up to eight R/W heads. It has built in data separation and features data rates of up to 5 MBytes/sec, 256 sector addressing range, CRC generation/verification on ID fields, unlimited sector interleave capability, automatic retries on all errors, and automatic restore and re-seek on seek error.

The new Model HDC-1001 Hard Disk Controller comes with a CP/M BIOS diskette and a price of \$500.

For more information, contact: Advanced Digital Corp., 12700 B Knott Ave., Garden Grove, CA 92641, (714)891-4004.

Conference Session

### Window Graphics on Olivetti's M20

Management of windows may appear difficult to programmers who have not worked with them before. In his 8th Faire talk, "Using Window Graphics in Basic on Olivetti's M20," Richard Mateosian will attempt to show the ease with which window management can be accomplished.

Mateosian will discuss the Olivetti M20 Personal Computer which uses a version of Microsoft Basic 5.2 that

allows the M20's 256x512-pixel bit-mapped display to be divided into up to 16 independent rectangular windows. Mateosian will share examples from his own desk assistance program which is written in Basic on the M20. The program uses separate windows for simultaneous time, calendar and appointment displays, a desk calculator, telephone directory, and a variety of utility functions.

Gossip . . . (continued from page 22) concerned with the bottom line of their balance sheet and decreasingly concerned with quality and service to their customers, we are delighted to encounter the likes of Mssr. Frank. He exhibits consistent loyalty to his friends, his customers and his industry, and it is well-reflected in the

quality and ethics of his business dealings.

### dbase II IS DE BASE TO SEE

We have recently been experimenting with Ashton-Tate's "dbase II" (yes, it's lower-case) database system. For a microcomputer, it is a massive, robust DBMS - certainly earning its "system" classification.

It now includes a very handy screen formatting program called "zip" that works along the same lines as the "what you see is what you get" CRT-oriented text editors.

Though it is certainly nontrivial to learn - as would be any system of its power and generality - we have, so far, found it to be significantly easier to use and faster in execution than several other database systems we have examined. Also - if you tried it some time ago - there have been significant enhancements over earlier releases, including better documentation, and access to multiple files.

### FOR FORTH FANATICS

Shortly before press time, we received two Forth compilers for the 8086/8088 family - one from Laboratory Microsystems (8086 Forth), and one from Forth, Inc. (Forth, Level II). Both are well documented.

The 8086 Forth includes a "Towers of Hanoi" program that beautifully demonstrates some of the language's more impressive capabilities. This demo executes quickly, and consists of less than six screens of reasonably sparse code.

Forth - Level II is a comprehensive, stand-alone system for the IBM PC. It runs outside of the PC's normal operating system, among other things, allowing it to increase execution speed under some circumstances.

## Get the Reel Thing.

The Computer Faire '83 Conference Program is being professionally recorded by  
Cassette Services Co.

Audio cassettes may be purchased at our booth located in the lobby of the Civic Auditorium.

Cassettes will be available approximately 30 minutes after completion of each session.

Cassettes may also be ordered subsequent to the conference by mail and telephone:

19745 Oakmont Dr.  
Los Gatos, CA 95030  
(408) 554-6657

ENLIGHTEN!  
ELUCIDATE!  
EDUCATE!

Give a talk on your favorite computing topic at the First IBM PC Faire, August 26-28, 1983, in San Francisco. You can even create and chair your own conference session.

All accepted papers will appear in the *Conference Proceedings of the First IBM PC Faire*, available at the show.

The deadline for abstracts and camera-ready papers is June 14, 1983.

Call or write for a Speaker's Kit and more information today: Computer Faire, 345 Swett Road, Woodside CA 94062, (415)-851-7077.

# BEST of the COMPUTER FAIRES

## Conference Proceedings of the West Coast Computer Faires

Listed below are the section titles for each volume.

### 1. THE BEST OF THE COMPUTER FAIRES, VOLUME I Conference Proceedings of the 1st West Coast Computer Faire

Banquet Presentations  
Tutorials for the Computer Novice  
People & Computers  
Human Aspects of System Design  
Personal Computers for the Physically Disabled  
Legal Aspects of Personal Computing  
Heretical Proposals  
Computer Art Systems  
Music & Computers  
Electronic Mail  
Computer Networking for Everyone  
Personal Computers for Education  
Residential Energy & Computers  
Computers & Systems for Very Small Business  
Entrepreneurs  
Speech Recognition & Speech Synthesis by Home Computers  
Tutorials on Software Systems Design  
Implementation of Software Systems & Modules  
High Level Languages for Home Computers  
Multi Tasking on Home Computers  
Homebrew Hardware  
Bus & Interface Standards  
Microprogrammable Microprocessors for Hobbyists  
Amateur Radio & Computers  
Commercial Hardware

### 2. THE BEST OF THE COMPUTER FAIRES, VOLUME II Conference Proceedings of the 2nd West Coast Computer Faire

Banquet Presentations  
An Introduction for the Absolute Novice  
Computers for the Physically Disabled  
Computers for the Visually Handicapped  
Exotic Computer Games  
Computers in the Arts  
Legal Aspects of Home Computers  
Computer Esoterica  
Communications Networks & Personal Computers  
Public-Access Computer Centers  
Computers in Education  
Business Computing on Small Machines  
For Computer Businesspeople & Craftspeople  
Microcomputer Applications  
Speech Input & Output  
Computers in Amateur Radio
