

Laszlo A. Belady

Research Division, Yorktown Heights, New York.

Aeronautical engineering (Dipl. Ing., Technical University, Budapest, Hungary, 1950). Prior to joining IBM Research, he worked as a development engineer in Hungary, Germany, and France. As a Research Staff Member, he has done work on program behavior, storage management strategies, computer graphics, and secure operating systems. He has also been visiting McKay Lecturer at the University of California at Berkeley (1971-1972), Distinguished Lecturer of the IEEE Computer Society ((1972 - 1974), and Senior Visiting Fellow at the Imperial College, London (1974). He has lectured at universities in the United States, England, France, Germany, Israel, and Italy. He is currently conducting research in program development and design methodology.

Michael E. Fagan

Data Processing Product Group, Poughkeepsie, New York.

Currently he is manager of the Programming Methodology Department in the Poughkeepsie Laboratory. He originated the use of inspections for program development.

M. M. Lehman

Computing Science, Imperial College of Science and Technology, London, England.

Mathematics (Ph.D., Imperial College of Science and Technology, London, England). Before joining the IBM Research Division in 1964, he was employed by the London Computer Laboratory of Ferranti Ltd., Murphy Radio Ltd., and the Scientific Department of the Israel Ministry of Defence. At IBM, he did research on parallel processing. He later assisted in a study of the programming process. While at IBM, he was Adjunct Professor of Electrical Engineering at Columbia University graduate school. In 1972, Dr. Lehman was appointed to the Chair of Computing Science at the Imperial College of Science and Technology.

Glenford J. Myers

IBM Systems Research Institute, New York, New York.

Systems and information science (M.S., Syracuse University, 1971). Since joining IBM in 1968, he has participated in software development for the System/360 Model 44 and OS/VS2. He has worked in the areas of computer security, data management, and programming methodology. At the Systems Research Institute he teaches courses in composite design, software reliability, and microprogramming. As a research project, he is investigating relationships of computer architecture to software reliability.
