DF(VIII)   DF(VIII)

NAME

df − disk free

SYNOPSIS

df [filesystem]

DESCRIPTION

Df prints out the number of free blocks available on a file system. It also prints out (in parenthesis) the number of blocks which are free but not in the in-core free list. These blocks will be be put on the in-core free list when this list is exhausted.

If the file system is unspecified, the free space on all of the normally mounted file systems is printed.

FILES

/dev/rf?, /dev/rk?, /dev/rp?
